IRB 120 industrial robot

ABB's smallest robot – for flexible and compact

Compact and lightweight

As the smallest robot from ABB, the IRB 120 offers all the functionality and expertise of the ABB range in a much smaller package. Its reduced weight of only 25 kg and compact design enables it to be mounted virtually anywhere, whether it is inside a cell, on top of a machine or close to other robots on the production line.

Multipurpose

Ideal for a wide range of industries including the electronic, food and beverage, machinery, solar, pharmaceutical, medical and research sectors, the IRB 120 joins ABB's fourth-generation of new robotic technology.

A white finish Clean Room ISO class 3 version enhances this versatility by making it suitable for environment with stringent cleanliness standard.

Food Grade Lubrication

This Food Grade Lubrication (NSF H1) option includes Clean Room ISO Class 3 which ensure uncompromising safety and hygiene for food and beverage applications. The Clean Room ISO 3 design eliminates the potential for contamination of the food handling area. This option provides smooth surfaces and special paint for easier cleaning.

Easy to integrate

Weighing in at only 25kg, this robot arm is truly the most portable and easy to integrate on the market. It can be mounted at any angle without any restriction. The smooth surfaces are easy to clean and the cables for air and customer signals are internally routed, all the way from the foot to the wrist, ensuring that integration is effortless.

The IRB 120 robot is the latest addition to ABB's new fourth-generation of robotic technology and ABB's smallest robot ever produced. Ideal for material handling and assembly applications, the new IRB 120 robot provides an agile, compact and lightweight solution with superior control and path accuracy.

Optimized working range

In addition to a horizontal reach of 580 mm, the robot has best in class stroke and the ability to reach 312 mm below its base. Furthermore, the IRB 120 has a very compact turning radius, which is enabled by the robot's symmetric architecture, without offset on axis Z. This ensures the robot can be mounted close to other equipment and the slim wrist enables the arm to reach closer to its application.

Fast, accurate and agile

Designed with a light, aluminum structure, the powerful compact robot ensure the robot is enabled with a fast acceleration, and can deliver accuracy and agility in any application. Using the IRB 120T variant, cycle times can be reduced up to 25% where the work piece needs extensive re-orientation and axes 4, 5 and 6 are predominantly used. This faster versions is well suited for pick and packing applications and guided operations together with PickMaster 3™.

IRC5 Compact controller – optimised for small robots

ABB's new IRC5 Compact controller takes the capabilities of the extremely powerful IRC5 controller and presents them in a truly compact format.

The new Compact controller brings accuracy and motion control to applications, which previously had been exclusive to large installations.

In addition to space saving benefits, the new controller also enables easy commissioning through one phase power input, external connectors for all signals and a built-in expandable I/O, 24 out, I/O system.

Robotics and Automation Handbook Thomas R. Kurfess,2018-10-03 As the capability and utility of robots has increased dramatically with new technology robotic systems can perform tasks that are physically dangerous for humans repetitive in nature or require increased accuracy precision and sterile conditions to radically minimize human error The Robotics and Automation Handbook addresses the major aspects of designing fabricating and enabling robotic systems and their various applications It presents kinetic and dynamic methods for analyzing robotic systems considering factors such as force and torque From these analyses the book develops several controls approaches including servo actuation hybrid control and trajectory planning

Design aspects include determining specifications for a robot determining its configuration and utilizing sensors and actuators. The featured applications focus on how the specific difficulties are overcome in the development of the robotic system. With the ability to increase human safety and precision in applications ranging from handling hazardous materials and exploring extreme environments to manufacturing and medicine, the uses for robots are growing steadily. The Robotics and Automation Handbook provides a solid foundation for engineers and scientists interested in designing, fabricating or utilizing robotic systems. Proceedings, 2002. Robot Control 2000 (SYROCO'00) Peter Kopacek, 2001. This Proceedings contains the papers presented at the sixth IFAC Symposium on Robot Control 2000 SYROCO 00 held in Vienna Austria on 21-23 September 2000. The contributions cover the whole field of robot control starting with the classical subjects like non linear, robust and hybrid control, force and tracking control, modelling and identification, simulation and education, neural and fuzzy control. But new robot applications require new robot concepts and new control tasks. In consequence most of the contributions deal with mobile intelligent robots and multiple robot systems but also new applications like disassembly. One of the fastest growing fields in the last three years is development and control of robots for entertainment, leisure and hobby. In four survey papers the state of the art in robot control and further developing trends were emphasised. Because the field of robotics is growing up today in smaller countries two presentations deal with robots in Brazil and Macedonia. The very important field of sensor fusion and an industrial view of future developments in robot control were also topics of survey papers. **Sheet Metal Industries**, 1995. *Intelligent Robots and Computer Vision XVI* Society of Photo-optical Instrumentation Engineers, 1997.
