

Coulombic Attraction

What variables will affect the force of attraction between charged particles?

Why?

Coulombic attraction is the attraction between oppositely charged particles. For example, the protons in the nucleus of an atom have attraction for the electrons surrounding the nucleus. This is because the protons are positive and the electrons are negative. The attractive force can be weak or strong. In this activity, you will explore the strength of attraction between protons and electrons in various atomic structures.

Model 1 – Distance and Attractive Force

		Force of Attraction (Newtons)
A	 0.10 nm	2.30×10^{-8}
B	 0.20 nm	0.58×10^{-8}
C	 0.30 nm	0.26×10^{-8}

1. What subatomic particles do these symbols represent in Model 1?

 protons  electrons

2. Would you expect to observe attraction or repulsion between the subatomic particles in Model 1?

Attraction.

3. Consider the data in Model 1.

- a. What are the independent and dependent variables in the data?

Distance Force of Attraction

- b. Write a complete sentence that describes the observed relationship between the independent and dependent variables in Model 1.

As distance increases, force of attraction decreases. (inverse)

4. If the distance between a proton and electron is 0.50 nm, would you expect the force of attraction to be greater than or less than 0.26×10^{-8} N?

less than 0.26×10^{-8} N

5. If two protons are 0.10 nm away from one electron, would you expect the force of attraction to be greater than or less than 2.30×10^{-8} N?

Greater than 2.30×10^{-8} N

Unified Valence Bond Theory of Electronic Structure N. D. Epiotis, 2012-12-06 The bond diagrammatic representation of molecules is the foundation of MOVb theory To a certain extent this kind of representation is analogous to the one on which resonance theory is based and this fact can be projected by a comparison of the various ways in which MOVb theory depicts a species made up of three core and two ligand MO's which define two subsystems containing a total of six electrons and the ways in which resonance theory i.e qualitative VB theory depicts a six electron six AO species such as the pi system of CH₂=CH₂ The 2 different pictorial representations are shown in Scheme 1 so that the analogies are made evident First of all the total MOVb diagrammatic representation of the 6 5 species is obtained by a linear combination of three complete bond diagrams as in A1 which describe the optimal linear combination of 1 MOVb Configuration Wavefunctions CW's By the same token a total VB diagrammatic representation of the 6 6 species can be obtained by writing a dot structure as in B1 and taking this to mean the optimal linear combination of all VB CW's Next we can approximate the MOVb wavefunction of the 6 5 species by one complete or detailed bond diagram A2 No simple VB representation analogy can be given in this case Alternatively we can approximate the MOVb wavefunction by a linear combination of compact bond diagrams as in A3 in the way described before

Multiscale Modelling of Organic and Hybrid Photovoltaics David Beljonne, Jerome Cornil, 2014-08-12 The series Topics in Current Chemistry presents critical reviews of the present and future trends in modern chemical research The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology medicine and materials science The goal of each thematic volume is to give the non specialist reader whether in academia or industry a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual concentrating on the methodological thinking that will allow the non specialist reader to understand the information presented Contributions also offer an outlook on potential future developments in the field Review articles for the individual volumes are invited by the volume editors Readership research chemists at universities or in industry graduate students
