Educational Encounters: Nordic Studies in Early Childhood Didactics Niklas Pramling,Ingrid Pramling Samuelsson,2011-08-10 Qualitative analyses of young children s learning in natural settings are rare so this new book will make educators sit up and pay attention It lays out a Nordic or continental European teaching and learning paradigm whose didactic framework is distinct from the Anglo American system This analysis which features contributions and case studies from researchers in a range of subjects is built on principles such as the learner s perspective establishing sufficient intersubjectivity pointing out and informing experience linguistically After clarifying some historical background the book discusses the contemporary emphasis in early childhood education on pedagogy learning What should didactics mean in educating young children The book examines the opportunities for learning that teachers provide for children in early

childhood education as well as how children respond to these opportunities It presents empirical studies from a variety of naturalistic settings including mathematics making visual art ecology music dance literacy and story telling as well as learning about gender morality and democracy The authors seek to answer key questions about the processes involved in both teaching and learning What challenges do teachers face as they try to expand children s knowledge in various fields of learning How do they respond to these challenges and what can we learn about children s corresponding uptake What now requires further research One key distinction in researching children s learning is between studies that look at process and those that analyze product In the tradition of Piaget Vygotsky and Werner as well as Mercer and Valsiner s more recent work this book advocates the importance and relative rareness of the former type of study Wanda Hears the Stars Amy S.

Time, Space, and Number in Physics and Psychology (Psychology Revivals) William R. Uttal,2014-10-14 The crux of the debate between proponents of behavioral psychology and cognitive psychology focuses on the issue of accessibility Cognitivists believe that mental mechanisms and processes are accessible and that their inner workings can be inferred from experimental observations of behavior Behaviorists on the contrary believe that mental processes and mechanisms are inaccessible and that nothing important about them can be inferred from even the most cleverly designed empirical studies One argument that is repeatedly raised by

cognitivists is that even though mental processes are not directly accessible this should not be a barrier to unravelling the nature of the inner mental processes and mechanisms Inference works for other sciences such as physics so why not psychology If physics can work so successfully with their kind of inaccessibility to make enormous theoretical progress then why not psychology As with most previous psychological debates there is no killer argument that can provide an unambiguous resolution In its absence author William Uttal explores the differing properties of physical and psychological time space and mathematics before coming to the conclusion that there are major discrepancies between the properties of the respective subject matters that make the analogy of comparable inaccessibilities a false one This title was first published in 2008
