

# Isaac Newton's 3 Laws of Motion

**Sir Isaac Newton (1642-1727)** was an English physicist and mathematician. Before the age of 30 he formulated the laws of motion and invented calculus. Much of our modern science is based on Newton's

## Newton's Laws of Motion

### Law One – Law of Inertia

An object at rest will stay at rest unless acted on by an unbalanced force.  
 An object in motion will stay in motion unless acted upon by an unbalanced force.

OR

*Things keep moving or stay at rest, unless a net force acts upon them.*

### Law Two – $F = ma$

The acceleration of an object is proportional to the force acting on it and inversely proportional to its mass.

OR

*Force causes acceleration, while mass resists acceleration*

### Law Three –

**Law of Equal and Opposite Forces.**  
 Whenever one object exerts a force on another object, the second exerts an equal and opposite force on the first.

OR

*For every action there is an equal and opposite reaction.*

### Inertia

Inertia is the property of an object that resists change of motion.

Moving objects have inertia: they want to keep moving;  
 stopped objects have inertia: they want to stay at rest.

*More mass = more inertia!*

*Something that is harder to push has more inertia!*

*More mass,  
more inertia*

*Less mass,  
less inertia*

### Force

A **force** is any action that can change or cause motion.  
**A force is any push or pull.**  
 We use Newtons (N) to measure force.

### Net Force

Net force is the sum of all the forces and has direction. (Be sure to make right positive and left negative.)

*An object will move in the direction of the net (or unbalanced) force.*

Net Force = + 200 N - 400 N = - 200 N (left)

### Newton's Second Law

Force  
(in Newtons)

$$F = ma$$

Mass  
(in kg)

Acceleration  
(in m/sec<sup>2</sup>)

*Force equals mass times acceleration.*

$F = ma$  tells us:

For the same acceleration,  
**more mass**

**requires more force.**

For the same mass,  
**more acceleration**  
**requires more force.**

Newton's 2nd Law tells us that when you accelerate (stomp on the gas) or decelerate quickly (brake fast) you use more force and wear out engine parts and brakes faster.

*Ex. How big a force does it take to give a 50 kg object an acceleration of 40 m/s<sup>2</sup>.*

Variables:

$$40 \text{ m/s}^2 = a$$

$$50 \text{ kg} = m$$

$$F = ?$$

Solve:

$$F = ma$$

$$F = 50(40)$$

$$F = 50 \times 40$$

$$F = 2000\text{N}$$

Equation:

$$F = ma$$

*Ex. If a 50 N force pulls on a 10 kg object, how much acceleration will occur?*

Variables:

$$50 \text{ N} = F$$

$$10 \text{ kg} = m$$

$$a = ?$$

Solve:

$$F = ma$$

$$50 = 10a$$

$$\frac{50}{10} = \frac{10a}{10}$$

$$a = 5 \text{ m/s}^2$$

Equation:

$$F = ma$$

*Ex. A force of 49 N causes a 7 m/s<sup>2</sup> acceleration. Find the mass of the object it was pulling.*

Variables:

$$49 \text{ N} = F$$

$$7 \text{ m/s}^2 = a$$

$$m = ?$$

Solve:

$$F = ma$$

$$49 = m7$$

$$\frac{49}{7} = \frac{m7}{7}$$

$$m = 7 \text{ kg}$$

Equation:

$$F = ma$$

Isaac Newton's Scientific Method examines Newton's argument for universal gravity and his application of it to resolve the problem of deciding between geocentric and heliocentric world systems by measuring masses of the sun and planets. William L. Harper suggests that Newton's inferences from phenomena realize an ideal of empirical success that is richer than prediction. Any theory that can achieve this rich sort of empirical success must not only be able to predict the phenomena it purports to explain but also have those phenomena accurately measure the parameters which explain them. Harper explores the ways in which Newton's method aims to turn theoretical questions into ones which can be answered empirically by measurement from phenomena and to establish that propositions inferred from phenomena are provisionally accepted as guides to further research. This methodology guided by its rich ideal of empirical success supports a conception of scientific progress that does not require construing it as progress toward Laplace's ideal limit of a final theory of everything and is not threatened by the classic argument against convergent realism. Newton's method endorses the radical theoretical transformation from his theory to Einstein's. Harper argues that it is strikingly realized in the development and application of testing frameworks for relativistic theories of gravity and very much at work in cosmology today.

Newton, 2023-05 Opticks is a groundbreaking work by Sir Isaac Newton that revolutionized the study of optics The book is structured as a series of experiments and observations that Newton conducted over several years to explore the nature of light and color One of the most significant contributions of Opticks is Newton's theory of color which he developed through his experiments with prisms He demonstrated that white light could be separated into a spectrum of colors and that each color was refracted at a different angle He also explored the idea that colors were not inherent to objects but were instead a result of the way light interacted with those objects In addition to his work on color Newton also explored the nature of light itself proposing that light was made up of particles which he called corpuscles rather than waves This idea was controversial at the time but it laid the groundwork for the development of modern particle physics *Sir Isaac Newton's Principia* Isaac
