Lean for Service Organizations and Offices Debashis Sarkar, 2015-01-25 Service organizations and offices worldwide are beginning to realize that only those companies that are efficient and able to meet the changing needs of customers will survive the fierce competition of the marketplace. Adopting lean puts anyone in a position more likely to build an intimate relationship with customers and build a foundation of operational excellence. Lean as a philosophy is new to the service companies and many of them struggle to find the correct approach for its adoption. Many declare early victory after a few successful projects only to realize that the benefits do not sustain over a period of time. This happens because they do not really know what it takes for a holistic lean implementation in a service organization. Lean has the ability to address a wide range of problems faced by service companies such as complexity reduction, sales force productivity enhancement, operations risk control, cost leadership, combining scale with flexibility, service excellence, and improving employee morale and involvement. Many of the principles discussed in the book are based on the author's first-hand experience in lean implementation. Being from a practitioner's viewpoint, *Lean for Service Organizations and Offices* is light on theory and heavy on application, exactly what's needed for a holistic and comprehensive lean transformation. Read an interview with the author in *The Hindu*.

Advances in Through-life Engineering Services Louis

Redding, Rajkumar Roy, Andy Shaw, 2017-04-22. This edited book offers further advances, new perspectives and developments from world leaders in the field of through life engineering services (TES). It builds up on the earlier book by the same authors entitled Through life Engineering Services: Motivation, Theory and Practice. This compendium introduces and discusses further the developments in workshop based and in situ maintenance and support of high value engineering products as well as the application of drone technology for autonomous and self healing product support. The links between integrated planning and planned obsolescence, risk and cost modelling are also examined. The role of data information and knowledge management relative to component and system degradation and failure is also presented. This is supported by consideration of the effects upon the maintenance and support decision by the presence of No Fault Found error signals within system data. Further to this, the role of diagnostics and prognostics is also discussed. In addition, this text presents the fundamental information required to deliver an effective TES solution strategy and identification of core technologies. The book contains reference and discussion relative to automotive, rail and several other industrial case studies to highlight the potential of TES to redefine the product creation and development process. Additionally, the role of warranty and service data in the product creation and delivery system is also introduced. This book offers a valuable reference resource for academics, practitioners and students of TES and the associated supporting technologies and business models that underpin whole life product creation and delivery systems through the harvesting and application of condition and use based data.
