Higher Education in Ethiopia Tebeje Molla,2018-01-18 This book focuses on higher

education in Ethiopia analysing persisting inequalities and policy responses against the backdrop of the extensive expansion and reform that the system has experienced in recent years Drawing on empirical data generated through interviews policy reviews and focus group discussions it explicates factors of structural inequality ranging from neoliberal policy orientations to repressive gender culture and geo political peripherality In a departure from conventional studies that consider policy a response to social problems the book takes a critical perspective to show the constitutive role of policy and explains how the representation of the problem of social inequality undermines equity policy outcomes in Ethiopian higher education Not only does the book problematise the framing of the problem of inequality in the system it also outlines strategies for designing transformative equity instruments In explaining structural factors of inequality and equity provisions the book productively combines sociological concepts with historical accounts and political economy insights Given the increased economic optimism associated with higher education in sub Saharan Africa and the neoliberal ideals underpinning much of the restructuring of the system in the region this is a timely and important contribution that sheds light on the social justice implications and consequences of such changes It offers fresh accounts of largely neglected qualitative cases of inequality making it a valuable read for students and researchers in the areas of Ethiopian education policy studies international and

comparative education and international development

Dietary and Nutritional Indices and Chronic Diseases

Sorayya Kheikouri, Mohammad Alizadeh, Masayo Nakamori Rossignoli, 2024-03-06 Chronic diseases such as diabetes cardiovascular diseases and cancers are known as a substantive worldwide challenge for health systems and are major contributors to mortality and morbidity According to the World Health Organization 71% of all deaths and 63.8% of Disability Adjusted Life Years DALYs are attributed to chronic diseases The composition of a diet influences health status and affects the occurrence and severity of chronic diseases As different components of a diet correlate and interact with one another addressing only individual dietary constituents does not usually help in analyzing the extent to which diets may prevent or contribute to the development or progress of chronic diseases In recent years the concept of dietary indices has received more attention by both researchers and clinicians and is used as a means to capture the overall effect of a diet on a specific disease or a group of related illnesses These indices are nutritionally derived mathematical algorithms which are developed on the bases of useful or detrimental nutrients and or food groups Thus the indices are frequently used to elucidate proper aspects of a specific diet such as quality diversity anti inflammatory anti oxidative and or anti glycation potential and acid load Examples include the dietary inflammatory index DII dietary total antioxidant capacity DTAC healthy eating index HEI dietary acid load and so forth There is accumulating evidence indicating a link between scores of dietary and nutritional indices and health outcomes
