

TAXONOMIC KEYS

Meaning of Taxonomic Key:

A key is a device, which when properly constructed and used, enables a user to identify its organisms. Keys are devices consisting of a series of contrasting or contradictory statements or propositions requiring the identifier to make comparisons and decisions based on statements in the key as related to the material to be identified.

Thus, a taxonomic key is a device for quickly and easily identifying to which species an unknown plant belongs.

The key consists of a series of choices, based on observed features of the specimen. It provides a choice between two contradictory statements resulting in the acceptance of one and the rejection of the other.

A single pair of contradictory statements is called a couplet and each statement of a couplet is termed a lead. By making the correct choice at each level of the key, one can eventually arrive at the name of the unknown specimen.
