Darwin-Inspired Learning Carolyn J. Boulter, Michael J. Reiss, Dawn L. Sanders, 2015-01-19 Charles Darwin has been extensively analysed and written about as a scientist Victorian father and husband However this is the first book to present a carefully thought out pedagogical approach to learning that is centered on Darwin s life and scientific practice The ways in which Darwin developed his scientific ideas and their far reaching effects continue to challenge and provoke contemporary teachers and learners inspiring them to consider both how scientists work and how individual humans read nature Darwin inspired learning as proposed in this international collection of essays is an enquiry based pedagogy that takes the professional practice of Charles Darwin as its source Without seeking to idealise the man Darwin inspired learning places importance on active learning hands on enquiry critical thinking creativity argumentation interdisciplinarity In an increasingly urbanised world first hand observations of living plants and animals are becoming rarer Indeed some commentators suggest that such encounters are under threat and children are living in a time of nature deficit Darwin inspired learning with its focus on close observation and hands on enquiry seeks to re engage children and young people with the living world through critical and creative thinking modeled on Darwin s life and science **Pathology and Hematology**

Grant, B. Rosemary Grant, 2020-03-31 Charles Darwin's experiences in the Galapagos Islands in 1835 helped to guide his thoughts toward a revolutionary theory that species were not fixed but diversified from their ancestors over many generations and that the driving mechanism of evolutionary change was natural selection In this concise accessible book Peter and Rosemary Grant explain what we have learned about the origin and evolution of new species through the study of the finches made famous by that great scientist Darwin's finches Drawing upon their unique observations of finch evolution over a thirty four year period the Grants trace the evolutionary history of fourteen different species from a shared ancestor three million years ago They show how repeated cycles of speciation involved adaptive change through natural selection on beak size and shape and divergence in songs They explain other factors that drive finch evolution including geographical isolation which has kept the Galapagos relatively free of competitors and predators climate change and an increase in the number of islands over the last three million years which enhanced opportunities for speciation and flexibility in the early learning of feeding skills which helped species to exploit new food resources Throughout the Grants show how the laboratory tools of developmental biology and molecular genetics can be combined with observations and experiments on birds in the
