Deconstructing Cosmology Robert H. Sanders, 2016-09-29 The advent of sensitive high resolution observations of the cosmic microwave background radiation and their successful interpretation in terms of the standard cosmological model has led to great confidence in this model's reality The prevailing attitude is that we now understand the Universe and need only work out the details In this book Sanders traces the development and successes of Lambda CDM and argues that this triumphalism may be premature The model's two major components dark energy and dark matter have the character of the pre twentieth century luminiferous aether While there is astronomical evidence for these hypothetical fluids their enigmatic properties call into question our assumptions of the universality of locally determined physical law Sanders explains how modified Newtonian dynamics MOND is a significant challenge for cold dark matter Overall the message is hopeful the field of cosmology has not become frozen and there is much fundamental work ahead for tomorrow's cosmologists

share in the wonders of cultural astronomy **Tools, Totems, and Totalities** Allen Batteau, Christine Z. Miller, 2025-02-11 This book provides a critical perspective on technology answering the questions of why technologies often disappoint It takes a sociotechnical and historical perspective on technology as developed by an engineer anthropologist and a design anthropologist to answer questions not only about why modern societies have great expectations of technology but also of why these technologies often fail to meet expectations Modern societies often search for technological solutions technofixes to what are institutional problems which include border crossings or urban mobility or improvements in productivity or improved communication It is disappointing when technofixes whether border walls or driverless cars or social media fail to live up to their promises of greater personal autonomy such as afforded by driverless cars or improved social harmony through social media Examining technology from the perspectives of instrumentality tools identity totems and world defining systems totalities develops a comprehensive perspective that is at once historically informed and cross culturally accurate Although instrumentality is obvious and is at the core of any understanding of technology identity is less so yet many modern tribes create their identity in terms of technological objects and systems whether transport systems cars and airplanes or social media or weapons guns Further modern technologies span the globe so that they exert imperative coordination over distant populations the use of cell phones around the world is testimony to this fact Such a critical perspective on technology can be useful in policy discussions of numerous issues affecting contemporary institutions Anton M.
