### **Spatial Simulation**

David O'Sullivan, George L. W. Perry, 2013-09-10 A ground up approach to explaining dynamic spatial modelling for an interdisciplinary audience Across broad areas of the environmental and social sciences simulation models are an important way to study systems inaccessible to scientific experimental and observational methods and also an essential complement to those more conventional approaches The contemporary research literature is teeming with abstract simulation models whose presentation is mathematically demanding and requires a high level of knowledge of quantitative and computational methods and approaches Furthermore simulation models designed to represent specific systems and phenomena are often complicated and as a result difficult to reconstruct from their descriptions in the literature This book aims to provide a practical and accessible account of dynamic spatial modelling while also equipping readers with a sound conceptual foundation in the subject and a useful introduction to the wide ranging literature Spatial Simulation Exploring Pattern and Process is organised around the idea that a small number of spatial processes underlie the wide variety of dynamic spatial models Its central focus on three building blocks of dynamic spatial models forces of attraction and segregation individual mobile entities and processes of spread guides the reader to an understanding of the basis of many of the complicated

models found in the research literature The three building block models are presented in their simplest form and are progressively elaborated and related to real world process that can be represented using them Introductory chapters cover essential background topics particularly the relationships between pattern process and spatiotemporal scale Additional chapters consider how time and space can be represented in more complicated models and methods for the analysis and evaluation of models Finally the three building block models are woven together in a more elaborate example to show how a complicated model can be assembled from relatively simple components To aid understanding more than 50 specific models described in the book are available online at [patternandprocess.org](http://patternandprocess.org) for exploration in the freely available Netlogo platform This book encourages readers to develop intuition for the abstract types of model that are likely to be appropriate for application in any specific context Spatial Simulation Exploring Pattern and Process will be of interest to undergraduate and graduate students taking courses in environmental social ecological and geographical disciplines Researchers and professionals who require a non specialist introduction will also find this book an invaluable guide to dynamic spatial simulation

*Advances in Intrinsic Motivation and Aesthetics* Hy I. Day, 2013-11-11 It has been both a pleasure and an honor to edit this book The pleasure has been in interacting with the gifted authors who wrote the chapters for this volume and the honor has been in knowing that the book is dedicated to a great man and a brilliant psychologist Daniel E Berlyne All the contributors to this book have been touched at some time by Dan Berlyne and his ideas Whether as his teachers his colleagues his peers his students or his friends and arguing partners we have all felt his presence and been improved by it The list of contributors to this volume is large and could have been much larger for a number of people in fact contacted me for the opportunity to contribute when they heard about the purpose of this book It is also an international list for Dan Berlyne's contacts were international The diversity in content and style is also intentional The authors were invited to contribute an original paper in the field in which they are presently engaged whether theoretical or a report of empirical work and to indicate the contribution that Dan Berlyne had made to their work As the reader will note contributions range from personal and contact in a laboratory to ideas that elicit controversy argument and intensive research Daniel Ellis Berlyne was born in Selford England a suburb of Manchester in 1924 and died in Toronto Canada on November 2 1976
