Life Science Paper March 2014:

Dual-use life science research and biosecurity in the 21st Century: Social, Technical, Policy, and Ethical Challenges

Jonathan E. Suk, Kathleen M. Vogel, Amanda Jane Ozin, 2015-06-04 In September 2011 scientists announced new experimental findings that would not only threaten the conduct and publication of influenza research but would have significant policy and intelligence implications The findings presented a modified variant of the H5N1 avian influenza virus hereafter referred to as the H5N1 virus that was transmissible via aerosol between ferrets These results suggested a worrisome possibility the existence of a new airborne and highly lethal H5N1 virus that could cause a deadly global pandemic In response a series of international discussions on the nature of dual use life science arose These discussions addressed the complex social technical political security and ethical issues related to dual use research This Research Topic will be devoted to contributions that explore this matrix of issues from a variety of case study and international perspectives **SET Life**

Stacks Up Edward Alden, Rebecca Strauss, 2016-02-01 American leadership in the world is built on the foundation of its economic strength Yet the United States faces enormous economic competition abroad and threats to its economy at home In How America Stacks Up Economic Competitiveness and U S Policy Edward Alden Bernard L Schwartz senior fellow at the Council on Foreign Relations and director of the Renewing America initiative and Rebecca Strauss associate director of Renewing America focus on those areas of economic policy that are the most important for reinforcing America s competitive strengths Covering education transportation trade and investment corporate tax worker retraining regulation debt and deficits and innovation How America Stacks Up shows how in a highly competitive global economy these seemingly domestic issues are all crucial to U S success in the global economy The line between domestic economic policy and foreign economic policy is now almost invisible and getting these policies right matters for more than just U S living standards The United States ability to influence world events rests on a robust competitive economy But without further investment in education infrastructure and innovation Alden and Strauss show the United States runs the risk of endangering its greatest competitive advantage Through insightful analysis and engaging graphics How America Stacks Up outlines the challenges faced by the United States and prescribes solutions that will ensure a healthy competitive U S economy for years to come **Open**

Science: the Very Idea Frank Miedema, 2021-10-29 This open access book provides a broad context for the understanding

of current problems of science and of the different movements aiming to improve the societal impact of science and research The author offers insights with regard to ideas old and new about science and their historical origins in philosophy and sociology of science which is of interest to a broad readership The book shows that scientifically grounded knowledge is required and helpful in understanding intellectual and political positions in various discussions on the grand challenges of our time and how science makes impact on society The book reveals why interventions that look good or even obvious are often met with resistance and are hard to realize in practice Based on a thorough analysis as well as personal experiences in aids research university administration and as a science observer the author provides while being totally open regarding science s limitations a realistic narrative about how research is conducted and how reliable objective knowledge is produced His idea of science which draws heavily on American pragmatism fits in with the global Open Science movement It is argued that Open Science is a truly and historically unique movement in that it translates the analysis of the problems of science into major institutional actions of system change in order to improve academic culture and the impact of science engaging all actors in the field of science and academia *Neuroscience and the Future of Chemical-Biological Weapons* Malcolm

Dando,2015-07-21 During the last century advances in the life sciences were used in the development of biological and chemical weapons in large scale state offensive programmes many of which targeted the nervous system This study questions whether the development of novel biological and chemical neuroweapons can be prevented as neuroscience progresses

Intellectual Property Issues in Biotechnology Harikesh Bahadur Singh,Alok Jha,Chetan Keswani,2016-09-26 This book integrates a science and business approach to provide an introduction and an insider view of intellectual property issues within the biotech industry with case studies and examples from developing economy markets Broad in scope this book covers key principles in pharmaceutical industrial and agricultural biotechnology within four parts Part 1 details the principles of intellectual property and biotechnology Part 2 covers plant biotechnology including biotic and abiotic stress tolerance GM foods in sustainable agriculture microbial biodiversity and bioprospecting for improving crop health and productivity and production and regulatory requirements of biopesticides and biofertilizers The third part describes recent advances in industrial biotechnology such as DNA patenting and commercial viability of the CRISPR Cas9 system in genome editing The final part describes intellectual property issues in drug discovery and development of personalized medicine and vaccines in biodefence This book is an ideal resource for all postgraduates and researchers working in any branch of biotechnology that requires an overview of the recent developments of intellectual property frameworks in the biotech sector

Unforgettable W. Michael Gray,2016-10-12 We have an uneasy relationship with the relentless deluge of information gushing out of academia and our media outlets To turn it off is escapist but to attempt to cognitively grapple with it is overwhelming In *Unforgettable* Enabling Deep and Durable Learning a nationally recognized master teacher gives professors and their students the means to chart a clear path through this information explosion Humans crave explanatory patterns

and this book enables teachers to think deeply about their academic disciplines to find and articulate their core explanatory principles and to engage their students in a compelling way of thinking An alternative title for this book could be Why the Best College Teachers Do What They Do because the author articulates a compelling rationale that will equip faculty to create and deliver transformative courses Students in transformative courses grapple with essential questions and gain mental muscle that equips them for real world challenges

Neuro-motor control and feed-forward models of locomotion in humans Marco Iosa, Nadia Dominici, Federica Tamburella, Leonardo Gizzi, 2015-07-29 Locomotion involves many different muscles and the need of controlling several degrees of freedom Despite the Central Nervous System can finely control the contraction of individual muscles emerging evidences indicate that strategies for the reduction of the complexity of movement and for compensating the sensorimotor delays may be adopted Experimental evidences in animal and lately human model led to the concept of a central pattern generator CPG which suggests that circuitry within the distal part of CNS i e spinal cord can generate the basic locomotor patterns even in the absence of sensory information Different studies pointed out the role of CPG in the control of locomotion as well as others investigated the neuroplasticity of CPG allowing for gait recovery after spinal cord lesion Literature was also focused on muscle synergies i e the combination of locomotor functional modules implemented in neuronal networks of the spinal cord generating specific motor output by imposing a specific timing structure and appropriate weightings to muscle activations Despite the great interest that this approach generated in the last years in the Scientific Community large areas of investigations remain available for further improvement e g the influence of afferent feedback and environmental constrains for both experimental and simulated models However also supraspinal structures are involved during locomotion and it has been shown that they are responsible for initiating and modifying the features of this basic rhythm for stabilising the upright walking and for coordinating movements in a dynamic changing environment Furthermore specific damages into spinal and supraspinal structures result in specific alterations of human locomotion as evident in subjects with brain injuries such as stroke brain trauma or people with cerebral palsy in people with death of dopaminergic neurons in the substantia nigra due to Parkinson s disease or in subjects with cerebellar dysfunctions such as patients with ataxia The role of cerebellum during locomotion has been shown to be related to coordination and adaptation of movements Cerebellum is the structure of CNS where are conceivably located the internal models that are neural representations miming meaningful aspects of our body such as input output characteristics of sensorimotor system Internal model control has been shown to be at the basis of motor strategies for compensating delays or lacks in sensorimotor feedbacks and some aspects of locomotion need predictive internal control especially for improving gait dynamic stability for avoiding obstacles or when sensory feedback is altered or lacking Furthermore despite internal model concepts are widespread in neuroscience and neurocognitive science neurorehabilitation paid far too little attention to the potential role of internal model control on gait recovery Many important scientists have

contributed to this Research Topic with original studies computational studies and review articles focused on neural circuits and internal models involved in the control of human locomotion aiming at understanding the role played in control of locomotion of different neural circuits located at brain cerebellum and spinal cord levels

The metabolic pathways and environmental controls of hydrocarbon biodegradation in marine ecosystems Joel E. Kostka, Andreas P. Teske, Samantha B. Joye, Ian Head, 2015-05-15 Biodegradation mediated by indigenous microbial communities is the ultimate fate of the majority of oil hydrocarbon that enters the marine environment The aim of this Research Topic is to highlight recent advances in our knowledge of the pathways and controls of microbially catalyzed hydrocarbon degradation in marine ecosystems with emphasis on the response of microbial communities to the Deepwater Horizon oil spill in the Gulf of Mexico In this Research Topic we encouraged original research and reviews on the ecology of hydrocarbon degrading bacteria the rates and mechanisms of biodegradation and the bioremediation of discharged oil under situ as well as near in situ conditions

Biodiversity in Ecosystems Juan A. Blanco, Yueh-Hsin Lo, Shovonlal Roy, 2015-04-17 The term biodiversity has become a mainstream concept that can be found in any newspaper at any given time Concerns on biodiversity protection are usually linked to species protection and extinction risks for iconic species such as whales pandas and so on However conserving biodiversity has much deeper implications than preserving a few although important species Biodiversity in ecosystems is tightly linked to ecosystem functions such as biomass production organic

matter decomposition ecosystem resilience and others Many of these ecological processes are also directly implied in services that the humankind obtains from ecosystems The first part of this book will introduce different concepts and theories important to understand the links between ecosystem function and ecosystem biodiversity The second part of the book provides a wide range of different studies showcasing the evidence and practical implications of such relationships
