The editorial board and invited authors represent international key figures from a broad range of disciplines including chemistry engineering material sciences logistics data and information sciences systems engineering economy and sustainability as well as disciplines related to culture art and design. With its diversity the book aims to fulfil the huge demand for information on novel technologies and legal approaches in politics industry and society. Key topics include Development of biodegradable plastics Advanced recycling strategies Design for recyclability Legal and economic perspectives Role of startups and innovative technologies Novel business models and business strategies. By allowing the reader to learn and apply the measures needed for the implementation of a Circular Plastics Economy the handbook will be of particular interest to innovators decision makers planners designers producers in industry politics and society as well as consumers students teachers communicators journalists and cultural workers **The Handbook of**

Science and Technology Studies, fourth edition Ulrike Felt, Rayvon Fouche, Clark A. Miller, Laurel Smith-Doerr, 2016-12-23 The fourth edition of an authoritative overview with all new chapters that capture the state of the art in a rapidly growing field. Science and Technology Studies (STS) is a flourishing interdisciplinary field that examines the transformative power of science and technology to arrange and rearrange contemporary societies. The Handbook of Science and Technology Studies provides a comprehensive and authoritative overview of the field reviewing current research and major theoretical and methodological approaches in a way that is accessible to both new and established scholars from a range of disciplines. This new edition sponsored by the Society for Social Studies of Science is the fourth in a series of volumes that have defined the field of STS. It features 36 chapters each written for the fourth edition that capture the state of the art in a rich and rapidly growing field. One especially notable development is the increasing integration of feminist gender and postcolonial studies into the body of STS knowledge. The book covers methods and participatory practices in STS research mechanisms by which knowledge people and societies are coproduced the design construction and use of material devices and infrastructures the organization and governance of science and STS and societal challenges including aging

volume II Yanhui Liao,Dara G. Ghahremani,Jianhua Chen,Kyoji Okita,Wenbin Guo,2023-10-17 This Research Topic is the second volume of the Community Series in Neurobiological Biomarkers for Developing Novel Treatments of Substance and Non Substance Addiction Please see the first volume here Many people suffer from substance from nicotine or alcohol to heroin methamphetamine cocaine etc or non substance from gaming gambling to shopping internet smartphone etc addiction Both types of addiction are associated with severe health economic and social consequences and are far too often result in both familial and personal tragedies Unfortunately current treatments are not very effective for either substance or non substance addiction so novel treatments are desperately needed For example for nicotine addiction despite very well documented health risks of cigarette smoking and its economic and societal costs globally more than 30% of males still smoke and although many smokers desire to quit only approximately 5 30% will achieve abstinence with 6 months or more of the best available current treatments And the story for nicotine addiction is far from unique presenting a huge challenge for the entire addiction field Therefore there is a vital need to improve outcomes for the treatment of both substance and non substance addictions Recent work exploring neurobiological mechanisms of the treatment response at the molecular cellular and systems levels with a broad range of technologies such as Magnetic Resonance Imaging MRI genetics and genomics have opened new avenues for developing novel treatments through the detection of neurobiological biomarkers predicting efficacious outcomes in addicted patients
