Advances on Green Concrete for Structural Purposes Joaquim A.O. Barros, Liberato Ferrara, Enzo Martinelli, 2017-05-29 This book is mainly based on the results of the EU funded UE FP7 Project EnCoRe which aimed to characterize the key physical and mechanical properties of a novel class of advanced cement based materials incorporating recycled powders and aggregates and or natural ingredients in order to allow partial or even total replacement of conventional constituents More specifically the project objectives were to predict the physical and mechanical performance of concrete with recycled aggregates to understand the potential contribution of recycled fibers as a dispersed reinforcement in concrete matrices and to demonstrate the feasibility and possible applications of natural fibers as a reinforcement in cementitious composites All of these aspects are fully covered in the book The opening chapters explain the material concept and design and discuss the experimental characterization of the physical chemical and mechanical properties of the recycled raw constituents as well as of the cementitious composite incorporating them The numerical models with potentialities for describing the behavior at material and structural level of constructions systems made by these composites are presented Finally engineering applications and guidelines for production and design are proposed
