**Towards an embodied science of intersubjectivity: Widening the scope of social understanding research** Ezequiel Di Paolo, Hanne De Jaegher, 2015-06-16 An important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition This problem is understood as how we figure out other minds relying only on indirect manifestations of other people's intentional states which are assumed to be hidden private and internal Research on this question has mostly investigated how individual cognitive mechanisms achieve this task A shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes This interactive expansion of the conceptual and methodological toolkit for investigating social cognition we now propose can be followed by an expansion into wider and deeply related research questions beyond but including that of social cognition narrowly construed Our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of

how we figure out other minds These phenomena include acting and perceiving together verbal and non verbal engagement experiences of dis connection management of relations in a group joint meaning making intimacy trust conflict negotiation asymmetric relations material mediation of social interaction collective action contextual engagement with socio cultural norms structures and roles etc These phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research We use the broader notion of embodied intersubjectivity to refer to this wider set of phenomena This Research Topic aims to investigate relations between these different issues to help lay strong foundations for a science of intersubjectivity the social mind writ large To contribute to this goal we encouraged contributions in psychology neuroscience psychopathology philosophy and cognitive science that address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive from observational to participatory

of economic and political reform for those who espouse a neoliberal model of development. The neoliberal policies and the resulting restructuring of the country have been accompanied by narratives of progress, prosperity and modernisation and justified in the name of development. But this self-celebratory narrative, which is critiqued by many in Uganda, masks the disruptive social impact of these reforms and silences the complex and persistent crises resulting from neoliberal transformation. Bringing together a range of leading scholars on the country, this collection represents a timely contribution to the debate around the New Uganda, one which confronts the often sanitised and largely depoliticised accounts of the Museveni government and its proponents. Harnessing a wealth of empirical materials, the contributors offer a critical multi-disciplinary analysis of the unprecedented political, socio-economic, cultural and ecological transformations brought about by neoliberal capitalist restructuring since the 1980s. The result is the most comprehensive collective study to date of a neoliberal market society in contemporary Africa, offering crucial insights for other countries in the Global South.
