Life Science Third Term 2014:

Time And Science - Volume 2: Life Sciences Remy Lestienne, Paul Harris, 2023-06-22 Life and Time are very closely linked because life needs the patience of eons to emerge and evolve and also due to the precision timing of neural networks in the perception of the world encoding information and performing actions A dozen renowned biologists and neuroscientists collaborate in this volume to explore the various facets of timing in the living world The temporal programming of the activity of the genetic code controls the essential mechanisms of individual development from zygote to adult while evolution uses the succession of generations to accomplish its work For its part the brain accomplishes the miracle of justifying presentism and reconstructing the continuity of present time from the fragmented data accessible to the senses as well as measuring durations and dating events To this end the brain uses a multilevel temporal coding to transport and decode sensory information and prepare motor responses It is only gradually that we have discovered the temporal precision of the mechanisms involved of the order of a few milliseconds or less for the adjustment of neural networks or the synaptic plasticity used for memory formation Today the perfection of natural neural networks the energy saving use of spikes of electrical impulses to categorize the sensory environment and to guess its probable future is an example to the modelers and engineers of artificial intelligence

Stem-Cell Nanoengineering H. Baharvand, 2015-03-30 Stem Cell Nanoengineering reviews the applications of nanotechnology in the fields of stem cells tissue engineering and regenerative medicine Topics addressed include various types of stem cells underlying principles of nanobiotechnology the making of nano scaffolds nano tissue engineering applications of nanotechnology in stem cell tracking and molecular imaging nano devices as well as stem cell nano engineering from bench to bedside Written by renowned experts in their respective fields chapters describe and explore a wide variety of topics in stem cell nanoengineering making the book a valuable resource for both researchers and clinicians in biomedical and bioengineering fields

Dual-use life science research and biosecurity in the 21st

Century: Social, Technical, Policy, and Ethical Challenges Jonathan E. Suk, Kathleen M. Vogel, Amanda Jane Ozin, 2015-06-04 In September 2011 scientists announced new experimental findings that would not only threaten the conduct and publication of influenza research but would have significant policy and intelligence implications The findings presented a modified variant of the H5N1 avian influenza virus hereafter referred to as the H5N1 virus that was transmissible via aerosol between ferrets These results suggested a worrisome possibility the existence of a new airborne and highly lethal H5N1 virus that could cause a deadly global pandemic In response a series of international discussions on the nature of dual use life science arose These discussions addressed the complex social technical political security and ethical issues related to dual use research This Research Topic will be devoted to contributions that explore this matrix of issues from a variety of case study and international perspectives

Japanese Women in Science and Engineering Naonori Kodate, Kashiko Kodate, 2015-07-30 The gender gap in science technology engineering and mathematics STEM varies greatly

from country to country and the number of Japanese women in these fields remains relatively few This prompts us to ask why the proportion of female scientists in Japan is still remarkably low and what measures the government universities and research institutes are taking to address this issue This book sheds light on historical developments and the current gender equality situation in Japan through the lens of women in STEM It shows how a policy of gender equality in science and engineering has been introduced through the coordinated efforts of academia scientific societies and the government and how this has led to a slow but steady increase in female representation The book draws on extensive data including interviews with government officials scientists and educators in Japan to provide a revealing case study on how the underrepresentation of women in the fields of science technology and engineering has been approached and dealt with by a national government It heralds a new era for female scientists by showcasing several programmes undertaken by government universities and national research institutions to support multiple career paths for and the progression of female scientists in Japan Tracing the historical development of Japan s policies towards women in science and education this book will be welcomed by students and scholars interested in Japanese studies comparative social policy gender studies employment and the history of science and technology

Emergence and Modularity in Life Sciences Lars H. Wegner, Ulrich Lüttge, 2019-02-12 This book focuses on modules and emergence with self organization in the life sciences As Aristotle observed so long ago the whole is more than the sum of its parts However contemporary science is dominated by reductionist concepts and tends to neglect the non reproducible features of complex systems which emerge from the interaction of the smaller units they are composed of The book is divided into three major parts the essays in part A highlight the conceptual basis of emergence linking it to the philosophy of science systems biology and sustainability This is subsequently exemplified in part B by applying the concept of emergence to various biological disciplines such as genetics developmental biology neurobiology plant physiology and ecology New aspects of emergence come into play when biology meets the technical sciences as revealed in a chapter on bionics In turn part C adopts a broader view revealing how the organization of life follows a hierarchical order in terms of scalar dimensions ranging from the molecular level to the entire biosphere The idea that life is primarily and exclusively shaped by processes at the molecular level and in particular by the information encoded in the genome is refuted rather there is no hierarchy with respect to the level of causation in the cross talk between the levels In the last two chapters the evolutionary trend toward ever increasing complexity in living systems is interpreted in terms of the Gaia hypothesis sensu Lovelock the entire biosphere is viewed as a functional unit or holobiont like system organized to develop and sustain life on Earth

Evolving germs - Antibiotic resistance and natural selection in education and public communication Gustav Bohlin, 2017-10-20 Bacterial resistance to antibiotics threatens modern healthcare on a global scale Several actors in society including the general public must become more involved if this development is to be countered The conveyance of relevant information provided through education and media reports is

therefore of high concern Antibiotic resistance evolves through the mechanisms of natural selection in this way a sound understanding of these mechanisms underlies explanations of causes and the development of effective risk reduction measures In addition to natural selection functioning as an explanatory framework to antibiotic resistance bacterial resistance as a context seems to possess a number of qualities that make it suitable for teaching natural selection a subject that has been proven notoriously hard to teach and learn A recently suggested approach for learning natural selection involves so called threshold concepts which encompass abstract and integrative ideas The threshold concepts associated with natural selection include among others the notions of randomness as well as vast spatial and temporal scales Illustrating complex relationships between concepts on different levels of organization is one of several areas where visualizations are efficient Given the often imperceptible nature of threshold concepts as well as the fact that natural selection processes occur on different organizational levels visual accounts of natural selection have many potential benefits for learning Against this background the present dissertation explores information conveyed to the public regarding antibiotic resistance and natural selection as well as investigates how these topics are presented together by scrutinizing media including news reports websites educational textbooks and online videos The principal method employed in the media studies was content analysis which was complemented with various other analytical procedures Moreover a classroom study was performed in which novice pupils worked with a series of animations explaining the evolution of antibiotic resistance Data from individual written assignments group questions and video recorded discussions were collected and analyzed to empirically explore the potential of antibiotic resistance as a context for learning about evolution through natural selection Among the findings are that certain information that is crucial for the public to know about antibiotic resistance was conveyed to a low extent through wide reaching news reporting Moreover explanations based on natural selection were rarely included in accounts of antibiotic resistance in any of the examined media Thus it is highly likely that a large proportion of the population is never exposed to explanations for resistance development during education or through newspapers Furthermore the few examples that were encountered in newspapers or textbooks were hardly ever visualized but presented only in textual form With regard to videos purporting to explain natural selection it was found that a majority lacked accounts of central key concepts Additionally explanations of how variation originates on the DNA level were especially scarce These and other findings coming from the content analyses are discussed through the lens of scientific literacy and could be used to inform and strengthen teaching and scientific curricula with regards to both antibiotic resistance and evolution Furthermore several factors of interest for using antibiotic resistance in the teaching of evolution were identified from the classroom study These involve among others how learners perception of threshold concepts such as randomness and levels of organization in space and time are affected by the bacterial context

Biolaw and Policy in the Twenty-First Century Erick Valdés, Juan Alberto Lecaros, 2019-01-24 This book offers an impressive collection of contributions on the epistemology of international biolaw and

its applications both in the legal and ethical fields Bringing together works by some of the world's most prominent experts on biolaw and bioethics it constitutes a paradigmatic text in its field In addition to exploring various ideologies and philosophies including European American and Mediterranean biolaw traditions it addresses controversial topics straight from today's headlines such as genetic editing the dual use dilemma and neurocognitive enhancement The book encourages readers to think objectively and impartially in order to resolve the ethical and juridical dilemmas that stem from biotechnological empowerment and biomedical techniques Accordingly it offers a valuable resource for courses on biolaw law bioethics and biomedical research as well as courses that discuss law and the biosciences at different professional levels e.g. in the courts biomedical industry pharmacological companies and the public space in general

Fluorescence Microscopy in Life Sciences Juan Carlos Stockert, Alfonso Blazquez-Castro, 2017-12-15 Fluorescence Microscopy is a precise and widely employed technique in many research and clinical areas nowadays Fluorescence Microscopy In Life Sciences introduces readers to both the fundamentals and the applications of fluorescence microscopy in the biomedical field as well as biological research Readers will learn about physical and chemical mechanisms giving rise to the phenomenon of luminescence and fluorescence in a comprehensive way Also the different processes that modulate fluorescence efficiency and fluorescence features are explored and explained

Trends in Teaching Experimentation in the Life Sciences Nancy J. Pelaez, Stephanie M. Gardner, Trevor R. Anderson, 2022-05-11 This book is a guide for educators on how to develop and evaluate evidence-based strategies for teaching biological experimentation to thereby improve existing and develop new curricula It unveils the flawed assumptions made at the classroom department and institutional level about what students are learning and what help they might need to develop competence in biological experimentation Specific case studies illustrate a comprehensive list of key scientific competencies that unpack what it means to be a competent experimental life scientist It includes explicit evidence-based guidelines for educators regarding the teaching learning and assessment of biological research competencies The book also provides practical teacher guides and exemplars of assignments and assessments It contains a complete analysis of the variety of tools developed thus far to assess learning in this domain This book contributes to the growth of public understanding of biological issues including scientific literacy and the crucial importance of evidence-based decision making around public policy It will be beneficial to life science instructors biology education researchers and science administrators who aim to improve teaching in life science departments Chapters 6 12 14 and 22 are available open access under a Creative Commons Attribution 4.0 International License via link.springer.com

Handbook of Biology and Politics Steven A. Peterson, Albert Somit, 2017-05-26 The study of biology and politics or biopolitics has gained considerable currency in recent years as articles on the subject have appeared in mainstream journals and books on the subject have been well received The literature has increased greatly since the 1960s and 1970s when this specialization first made an appearance This volume assesses the contributions of biology to political science Chapters focus on general biological

approaches to politics biopolitical contributions to mainstream areas within political science and linkages between biology and public policy The volume provides readers with a comprehensive introduction to the subject

Successful STEM Mentoring Initiatives for Underrepresented Students Becky Wai-Ling Packard,2023-07-03 Successful STEM Mentoring Initiatives for Underrepresented College Students is a step by step research based guide for higher education faculty and administrators who are charged with designing mentoring programs to recruit and retain students from underrepresented groups Written by an acknowledged expert in the field of STEM mentoring the book constitutes a virtual consultant that enables readers to diagnose the issues they face identify priorities and implement appropriate practices to achieve their goals The book describes the real and perceived barriers that underrepresented students to include women students of color transfer students and first generation college students encounter when considering enrollment or participating in science courses considers the issues they face at the various transitions in their education from entering college to declaring a major and moving on to a profession and sets out the range of mentoring options available to program designers By posing key questions and using three running case illustrations of common dilemmas the book walks readers through the process of matching the best design options with the particular needs and resources of their own department or campus Intentionally brief and to the point the book is nonetheless a comprehensive guide to the full range mentoring models and best practices that also covers issues of institutional and departmental climate and teaching methods and offers insider insights to help designers avoid pitfalls as they create effective sustainable mentoring initiatives This guide will assist administrators working on new initiatives to broaden access and improve persistence and graduation in their programs as well as apply for research grants by clarifying objectives and identifying the effective evidence based practices to achieve them It also provides common conversation starters for departments to identify obstacles to enrollment and broaden participation
