## **Life Sciences Exemplar Grade 11 November 2014:**

**Human Factors in Effective Counter-Terrorism** Richard Warnes, 2024-02-29 This book seeks to provide a comparative assessment of the significance of human factors in effective counter terrorism. The phrase human factors is used to describe personal relationships, individual capabilities, effective leadership, technical interface, organisational culture, and the community engagement necessary to effectively minimise and control the threat of terrorism. Unlike many works in the field, this book is constructed around the input of experienced knowledge from over 170 semi-structured interviews of specialist military, policing, intelligence, and security practitioners, those actors actually involved in countering terrorism. These practitioners come from seven countries: the United Kingdom, Ireland, France, Spain, Israel, Turkey, and the United States, all of which have suffered over the years from different types of terrorist threat and responded with a mixture of counter-terrorist measures. Where military practitioners also discussed overseas counter-insurgency measures, that material has been included since terrorism forms a key aspect of such wider insurgencies. The resulting interview data was analysed through a variant of Grounded Theory to identify key emerging themes and issues, both positive and negative, relevant to human factors in the individual countries and more generically. This book incorporates the informed operational experiences and insights of the interviewees while seeking to provide examples of successful counter-terrorist measures at the strategic, operational, and tactical levels. This book will be of much interest to students of counter-terrorism, defence studies, and security studies in general.

**The Digital Coloniality of Power** Alexander I. Stingl, 2015-12-16 Trouble is afoot in Digital Culture and Nerdland. These are Alexander I. Stingl's claims: not the engine of freedom and democracy that they once were hailed to be, this much is already clear in the wake of the snooping and surveillance crises that broke in recent years. Digitalization is but another version of the coloniality of power and being that has been at work for decades and centuries. He poses the question: whether the Digital Age possesses the legitimacy that digitalization has claimed. His response is critically realistic, but he doesn't stop at a critique for criticism's sake. Inspired by the ideas of decolonial scholars, feminist science studies, current biological and neuro-cognitive research, and sociologists capable of reflection and self-criticism, Stingl attempts to break the canvas of sociology and show that adding a third and decolonial dimension to the two-dimensional sociological imagination is indeed possible. He illustrates that it is possible that classrooms, free speech on the internet, and the inequalities in the production and distribution of a new form of social capital, digital cultural health care capital, can be subjected to a decolonial perspective along a sociological line of inquiry if sociologists allow for relations with other disciplines and scholarship to be integrative conversations. The goal of this book is not to offer results or closed arguments but to create instead platforms for thinking further, opening new lines of inquiry, and to argue that it is not enough to identify problems or to attempt to solve the problems with politics or best practice solutions. Instead, he proposes we must learn to identify and make use of the opportunities that are produced by any problem. Stingl's conclusion is, in short, that a sociology that takes the decolonial challenge and critique

seriously can not be a sociological sub discipline or a sociology of a problem but it must be a sociology of opportunities

Trust-Based Observations Craig Randall,2020-07-30 The results are in observations are not improving teaching and learning Pertinently the Gates Foundation s recently completed effort to improve student outcomes through enhancing the teacher evaluation process failed to achieve substantive improvement The way observations are currently designed serve as an obstacle to teacher risk taking Teachers fear negative evaluations when their pedagogy is rated and they lack faith in being supported by supervisors because a trusting relationship between them and their observer has not been built Trust Based Observations Maximizing Teaching and Learning Growth is a schema changing evaluation model that understands people perform at their best when they feel safe and supported It begins with twelve 20 minute observations per week followed by collegial conversations driven by reflective questions sharing observed teaching strengths and the building of safe and trusting relationships with teachers Add the elimination of rating pedagogical skills and replace it with rating mindset and teachers trust When teachers fully embrace risk taking and innovation it leads to remarkable teaching transformations and improved student learning
