Research Modules for Pre-Service STEM Teachers Clair T. Berube, Shawn T. Dash, Cindy Thomas-Charles, 2019-01-01 STEM science technology engineering and mathematics is a fairly new concept in American education As separate subjects science and math have been around for a long time but have rarely been taught as a seamless unit of skills rather as discreet content areas This is not how the real world outside of the classroom functions however in actual research laboratories scientists infuse their science with math and their math with science and along with technology and engineering they solve real life problems In practice you cannot separate the various fields as you need all of them in order to discover the underpinnings of the natural world cure a disease or solve a problem with the space rover The American future depends on a scientifically literate workforce armed with knowledge about the laws and theories of science based on empirical facts instead of beliefs In addition there is a shortage of graduates in STEM related disciplines Economic data show that 1 million additional STEM graduates will be needed over the next decade to fill America s economic demand STEM based jobs are expected to grow 17% in the next 10 years outpacing the overall job growth of 10% If teachers across America were trained with fundamental and impending scientific concepts in their science methods courses at the university level scientific literacy can only dramatically improve Nanoscience is one such concept as it is multidisciplinary in nature and is regarded as the basis for innovated technologies in many fields The authors of this book seek to provide pre service and in service science teachers with high quality STEM modules with which to create lesson plans and problem based lessons to use in their future classrooms both at the elementary and secondary level Nanoscience was chosen since its applications reaches across virtually every scientific field from biology to physics and for that matter all STEM domains Inquire Within Douglas Llewellyn, 2014 Your definitive guide to inquiry and argument based science updated for today s standards Like most teachers are you struggling to make sense of the many recent shifts in science education especially the NGSS Luckily Doug Llewellyn is here to guide you every step along the way His two big aims with this new edition of Inquire Within To help you engage students in activities and explorations that draw on their big questions then build students capacity to defend their claims Always striking a balance between the why and the how this third edition models what the new reform efforts looks like in day to day practice New features include how to Teach argumentation a key standards requirement and 21st century career skill Adapt existing science curricula for inquiry based learning to meet today s standards Effectively differentiate scientific instruction for multiple intelligences to drive student achievement Improve students language arts analytic and communication skills through inquiry based instruction Utilize the many inquiry based lesson plans Develop your own inquiry based mindset and grow professionally You ll quickly discover for yourself that this third edition of Inquire Within stands on its own as your single best resource for keeping pace with science reform in the classroom Llewellyn s model of teaching and his rich array of practical examples can help every teacher and student to experiences that clearly illustrate what scientists and engineers do This is certainly a guide for the next generation of great teachers Juliana Texley President Elect National
