Assessment of Higher Order Thinking Skills Gregory Schraw, Daniel H. Robinson, 2011-10-01 This volume examines the assessment of higher order thinking skills from the perspectives of applied cognitive psychology and measurement theory. The volume considers a variety of higher order thinking skills including problem solving, critical thinking, argumentation, decision making, creativity, metacognition, and self-regulation. Fourteen chapters by experts in learning and measurement comprise four sections which address conceptual approaches to understanding higher order thinking skills, cognitively oriented assessment models, thinking in the content domains, and practical assessment issues. The volume discusses models of thinking skills as well as applied issues related to the construction, validation, administration, and scoring of performance-based, selected response, and constructed response assessments. The goal of the volume is to promote a better theoretical understanding of higher order thinking in order to facilitate instruction and assessment of those skills among students in all K-12 content domains as well as professional licensure and certification settings. **Science Benchmarking Report**, 2001

Technology Enhanced Innovative Assessment Hong Jiao, Robert W. Lissitz, 2017-11-01 Assessment innovation tied to technology is greatly needed in a wide variety of assessment applications. This book adopts an interdisciplinary perspective to learn from advances in developing technology-enhanced innovative assessments from multiple fields. The book's chapters address the development of virtual assessments including game-based assessment, simulation-based assessment, and narrative-based assessment, as well as how simulation and game-based assessments serve both formative and summative purposes. Further chapters address the critical challenge of integrating assessment directly into the learning process so that teacher effectiveness and student learning can be enhanced. Two chapters specifically address the psychometric challenges related to innovative items. One chapter talks about evaluating the psychometric properties of innovative items, while the other chapter presents a new psychometric model for calibrating innovative items embedded in multiple contexts. In addition, validity issues are addressed related to technology-enhanced innovative assessment. It is hoped that the book provides readers with rich and useful information about the development of several types of virtual assessments from multiple perspectives. The authors include experts from industry where innovative items have been used for many years and experts from research institutes and universities who have done pioneering work related to developing innovative items with formative applications to facilitate learning. In addition, expert advice has been provided on validating such work. *How to Measure Performance and Use Tests* Lynn Lyons Morris, Carol T.
