Whole School Approaches to Sustainability Arjen E.J. Wals, Birgitte Bjønness, Astrid Sinnes, Ingrid Eikeland, 2024-06-22 In response to urgent global sustainability challenges Education for Sustainable Development ESD and Global Citizenship Education have been prioritized in the United Nations Agenda 2030 under SDG 4.7 There is a growing awareness that treating concepts such as global citizenship sustainable development climate urgency and health and well being as separate subjects or topics to be added to a curriculum is ineffective as they are highly interconnected Additionally this approach is problematic as schools already have an overcrowded curriculum This edited volume brings together a range of scholars and reflective practitioners from across the globe who are investigating and enacting a whole school approach WSA in education for sustainability While the WSA and related approaches such as those advocated by EcoSchools are becoming more popular there is a lack of understanding of their underlying principles and the different manifestations in diverging socio cultural contexts at different educational levels This collection of chapters provides a deeper understanding of the WSA while also addressing its effectiveness possibilities for upscaling professional development needs for WSA practitioners interlinkages with more

Sharma, John A. Wightman,2015-09-04 A new perspective on the global food security situation and highlights the need for seeking a common vision and implementing global planning to define the manner in which the human species will manage its food security The basic question of is there enough food is examined in general and then in some detail The history of food production is reviewed in the hope that lessons can be learned from the past But even after ten thousand years of experience we are not able to feed adequately about a third of our total population despite what statistics can be made to tell us Intensive agriculture has stripped out the nutrients that support plant growth and marginalised extensive tracts of land The global solution to feed the growing population has been and continues to be produce more food Even during the last 30 years about 95 percent of global research investments have focused mainly on increasing productivity However about a third of the food produced sufficient to feed over two billion hungry people is lost or wasted in the food value chain Climate change is another confounding factor that impinges on our discussions Pests of all kinds continue to destroy food before and after it is harvested even though the technology to protect it is available A huge amount of food is wasted in value chains particularly at the domestic level Global food production systems are exposed to unprecedented biosecurity risks posed by invasive harmful organisms and this trend is likely to further exacerbate as current approach to biosecurity is based on the notional premise that lines on maps and the legislation that goes with them is sufficient to halt epidemics Solutions include extending the number of cultivated plant and animal species to include those

that can prosper in what are currently considered to be extreme environments

Role of Lipids in Virus Assembly Jamil S. Saad, Delphine M. Muriaux, 2015-07-28 RNA enveloped viruses comprise several families belonging to plus and minus strand RNA viruses such as retroviruses, flavoviruses and orthomyxoviruses. Viruses utilize cellular lipids during critical steps of replication like entry, assembly and egress. Growing evidence indicates important roles for lipids and lipid nanodomains in virus assembly. This special topic covers key aspects of virus membrane interactions during assembly and egress, especially those of retroviruses and Ebola virus (EBOV). Virus assembly and release involve specific and nonspecific interactions between viral proteins and membrane compartments. Retroviral Gag proteins assemble predominantly on the PM. Despite the great progress in identifying the factors that modulate retroviral Gag assembly on the PM, there are still gaps in our understanding of precise mechanisms of Gag membrane interactions. Studies over the last two decades have focused on the mechanisms by which other retroviral Gag proteins interact with membranes during assembly. These include human immunodeficiency virus (HIV), Rous sarcoma virus (RSV), equine infectious anemia virus (EIAV), Mason-Pfizer monkey virus (M-PMV), murine leukemia virus (MLV) and human T-lymphotropic virus type 1 (HTLV-1). Additionally, assembly of filoviruses such as EBOV also occurs on the inner leaflet of the PM. The articles published under this special topic highlight the latest understanding of the role of membrane lipids during virus assembly, egress and release.

Nutritional Cognitive Neuroscience Research at the Crossroads of Nutrition, Psychology, and Neuroscience Aron K. Barbey, Elizabeth J. Johnson, Margaret Joy Dauncey, 2019-01-23 Nutritional Cognitive Neuroscience is an emerging interdisciplinary field of research that seeks to understand nutrition's impact on human cognition and brain health across the life span. Research in this burgeoning field demonstrates that many aspects of nutrition, from entire diets to specific nutrients, affect brain structure and function and therefore have profound implications for understanding the nature of psychological health, aging and disease. The aim of this Research Topic in *Frontiers in Aging Neuroscience* is to examine recent empirical and theoretical contributions from Nutritional Cognitive Neuroscience with an emphasis on the following

primary areas of inquiry Nutrition and Brain Health An enduring aim of research in the nutritional sciences is to discover specific nutrients and dietary patterns that enhance cognitive function and brain health in the elderly Although an abundance of evidence supports a single or a few nutrients for the promotion of cognitive performance and brain health clinical trials using nutritional supplementation have been predominately unsuccessful Further research is therefore needed to better characterize the contributions of specific nutrients and nutrient combinations to cognitive performance and brain health Moderators of Nutrition s Impact on the Brain A second major area of research in Nutritional Cognitive Neuroscience investigates the mechanisms that underlie the effects of nutrition on brain health at the cellular molecular and circuit levels Accumulating evidence indicates that the effects of nutrition on brain health are complex and multifactorial reflecting the influence of particular nutrient combinations on specific brain networks and taking into account several moderating factors Considerably more research is needed to elucidate the complex interactions between nutrition and known moderating variables including age nutritional status genes environment and lifestyle in determining nutrition s impact on cognitive function and brain health Personalized Nutrition Research at the frontiers of Nutritional Cognitive Neuroscience establishes a personalized approach to nutritional intervention that takes into account individual variability in nutritional status brain health genes environment and lifestyle The goal of personalized nutrition is to enhance the precision of nutritional intervention and to enable novel applications to psychological health aging and disease
