Life Orientation Grade 9 Examination Scope 2014:

Towards an embodied science of intersubjectivity: Widening the scope of social understanding research

Ezequiel Di Paolo, Hanne De Jaegher, 2015-06-16 An important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition. This problem is understood as how we figure out other minds relying only on indirect manifestations of other people's intentional states which are assumed to be hidden, private and internal. Research on this question has mostly investigated how individual cognitive mechanisms achieve this task. A shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes. This interactive expansion of the conceptual and methodological toolkit for investigating social cognition we now propose can be followed by an expansion into wider and deeply related research questions beyond but including that of social cognition narrowly construed. Our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of how we figure out other minds. These phenomena include acting and perceiving together, verbal and non-verbal engagement, experiences of disconnection, management of relations in a group, joint meaning making, intimacy, trust, conflict, negotiation, asymmetric relations, material mediation of social interaction, collective action, contextual engagement with socio-cultural norms, structures and roles etc. These phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research. We use the broader notion of embodied intersubjectivity to refer to this wider set of phenomena. This Research Topic aims to investigate relations between these different issues to help lay strong foundations for a science of intersubjectivity, the social mind writ large. To contribute to this goal we encouraged contributions in psychology, neuroscience, psychopathology, philosophy and cognitive science that address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive, from observational to participatory. *The Routledge International Handbook of Life and Values Education in Asia* John Chi-Kin Lee, Kerry J Kennedy, 2024-06-28 This Handbook provides a comprehensive look at the educational scope of life and values that characterize 21st century Asia as well as those values shared across cultures. Some values are deeply resonant with the region's past while others reflect modernity and the new contexts in which Asian societies find themselves. Exploring these values of different types and the way they are constructed in Eastern and Western contexts, the contributors delve into the diversity of religious, moral and social education to promote greater understanding across cultures. While a range of values is identified here, there is no single set of values that can be applied to all people in all contexts. The time has long gone even for single societies when values can be imposed. Yet this Handbook emphasizes both the extent and importance of values to individuals and their societies; how they respond to these values may provide the key to better and more caring societies and to better lives for all.

Academics and teachers will find this Handbook resourceful because it raises important theoretical issues related to social values and their formation in distinctive contexts and provides novel insights into the diverse educational landscape in Asia. Policymakers and educators will also find this text helpful in learning to think about new ways to improve the quality of people's lives.

Adolescence Mental Health in School and University Iman Permana, Herni Susanti, 2024-07-29. A school, whether run by the government or a private institution, is established to prepare adolescents for adulthood. In some regions, some religious societies have established a comprehensive educational institution supported by their religious competencies requirement in their curriculum along with the national curriculum. Adolescence is a period of life that ranges from 10 to 19 years old and expands from school to the early phase of university. Adolescents are considered highly susceptible to mental health issues. Anxiety, depression, behavioral disorders, and suicidal attempts have been shown to increase before the age of 24. There is a myriad of factors that can contribute to the development of mental health disorders in this context, including family parenting style and bullying from peers and teachers. Failing to address contributing factors may hinder adolescents from fulfilling and sustaining healthy and productive adult lives.

Advanced Practice Palliative Nursing Constance Dahlin, Patrick Coyne, Betty Ferrell, 2016. Advanced Practice Palliative Nursing is the first text devoted to advanced practice nursing care of the seriously ill and dying. This comprehensive work addresses all aspects of palliative care, including physical, psychological, social, and spiritual needs. Chapters include symptoms common in serious illness, pediatric palliative care, spiritual and existential issues, issues around the role and function of the advanced practice nurse (APN), reimbursement, and nursing leadership on palliative care teams. Each chapter contains case examples and a strong evidence base to support the highest quality of care. The text is written by leaders in the field and includes authors who have pioneered the role of the advanced practice nurse in palliative care. This volume offers advanced practice content and practical resources for clinical practice across all settings of care and encompassing all ages from pediatrics to geriatrics.

Developmental Psychopathology, Risk, Resilience, and Intervention Dante Cicchetti, 2016-02-29. Examine the latest research merging nature and nurture in pathological development. Developmental Psychopathology is a four-volume compendium of the most complete and current research on every aspect of the field. Volume Four: Genes and Environment focuses on the interplay between nature and nurture throughout the life stages and the ways in which a child's environment can influence his or her physical and mental health as an adult. The discussion explores relationships with family, friends, and the community; environmental factors like poverty, violence, and social support; the development of coping mechanisms; and more, including the impact of these factors on physical brain development. This new third edition has been fully updated to incorporate the latest advances and to better reflect the increasingly multilevel and interdisciplinary nature of the field and the growing importance of translational research. The relevance of classification in a developmental context is also addressed, including DSM-5 criteria and definitions. Advances in developmental psychopathology are occurring increasingly quickly as

Witeska-Mlynarczyk,2024-02-13 Worldwide there have been consistently high or even rising incidences of people classified as mentally ill paired with increasing mental healthcare service utilization over the last decades While psychiatric institutions have been consistently expanding psychiatric knowledge has become increasingly dispersed and globalized making psychiatric vocabularies and classificatory systems widely available shaping increasing areas of life creating powerful markets for therapeutic services of all kinds and impacting how we understand ourselves and others This process can be described as the psychiatrization of society Psychiatrization is highly complex diverse and global although it takes different forms in different contexts involves various actors with largely diverging motives and is part of a wider assemblage of the psy disciplines

Integrative Ophthalmology Ningli Wang,2019-09-05 With the development of nature science and industrial technology more and more patients are benefitting from the rapid progress in ophthalmology as the use of new medicine and delicate surgical therapy has ensured them the chance to restore their sight However some problems have come up during its development of which the most serious one is the limitation of the ophthalmology Eyes are not isolated organs they are connected to our body and thus the general status of our body will affect the eyes function Therefore it is of great importance that the ophthalmologists see the big picture while dealing with the clinical problems Based on the above observations we put forward the concept of Integrative Ophthalmology and describe the ophthalmology related medical situations that are prone to be neglected in clinical practice in a bid to increase the awareness of doctors from all fields that a holistic view should be adopted in clinical practice and it is the patients that we are treating rather than the disease There are 9 parts in the book containing the concept of integrative ophthalmology intraocular and intracranial pressure gradient related diseases and the relationship between the different general status and eye disorders We do believe that the integrative ophthalmology is the key to the development of ophthalmology and hope readers can benefit from this book
