CONCRETE Innovations in Materials, Design and Structures FIB – International Federation for Structural Concrete, 2019-05-27 This Proceedings contains the papers of the fib Symposium CONCRETE Innovations in Materials Design and Structures which was held in May 2019 in Kraków, Poland. This annual symposium was co-organised by the Cracow University of Technology. The topics covered include Analysis and Design, Sustainability, Durability, Structures, Materials and Prefabrication. The fib Fédération internationale du béton is a not-for-profit association formed by 45 national member groups and approximately 1000 corporate and individual members. The fib's mission is to develop at an international level the study of scientific and practical matters capable of advancing the technical, economic, aesthetic and environmental performance of concrete construction. The fib was formed in 1998 by the merger of the Euro International Committee for Concrete (CEB) and the International Federation for Prestressing (FIP). These predecessor organizations existed independently since 1953 and 1952 respectively.

The Wiley Handbook of Early Childhood Development Programs, Practices, and Policies Elizabeth Votruba-Drzal, Eric Dearing, 2017-04-17 The first and only comprehensive review of current early childhood development theory, practices, policies and the science behind them. This unique and important book provides a comprehensive overview of the current theory, practices and policies in early childhood development within the contexts of family, school and community and society at large. Moreover, it synthesizes scientifically rigorous research from an array of disciplines in an effort to identify the most effective strategies for promoting early childhood development. Research into childhood development is booming and the scientific knowledge base concerning early childhood development is now greater than that of any other stage of the human life span. At the same time, efforts to apply that knowledge to early childhood practices, programs and policies have never been greater or more urgent. Yet surprisingly, until *The Handbook of Early Childhood Development Programs, Practices and Policies*, there was no comprehensive critical review of the applied science in the field. The book begins with in-depth coverage of child and family approaches. From there, it moves onto a consideration of school and community-based strategies. It concludes with a discussion of current social policies on health and development in early childhood and their implications. Provides a comprehensive overview of the state of the knowledge base along with guidance for the future of the field. Examines the underlying theory and basic science guiding efforts to promote early childhood development. Critically reviews the strength of the empirical support for individual practices, programs and policies. Explores key opportunities and barriers policymakers and practitioners face when implementing various approaches. Pays particular attention to socioeconomically disadvantaged and other disenfranchised populations. *The Handbook of Early Childhood Development Programs, Practices and Policies* is a valuable resource for practitioners, scholars, graduate students and advanced undergraduate students across the social sciences who are interested in strengthening their understanding of current strategies for promoting early childhood development and the science informing those strategies. Strategies for

The Schenley Experiment Jake Oresick, 2017-04-14 The Schenley Experiment is the story of Pittsburgh's first public high school a social incubator in a largely segregated city that was highly even improbably successful throughout its 156 year existence Established in 1855 as Central High School and reorganized in 1916 Schenley High School was a model of innovative public education and an ongoing experiment in diversity Its graduates include Andy Warhol actor Bill Nunn and jazz virtuoso Earl Hines and its prestigious academic program and pensions lured

such teachers as future Pulitzer Prize winner Willa Cather The subject of investment as well as destructive neglect the school reflects the history of the city of Pittsburgh and provides a study in both the best and worst of urban public education practices there and across the Rust Belt Integrated decades before Brown v Board of Education Schenley succumbed to default segregation during the white flight of the 1970s it rose again to prominence in the late 1980s when parents camped out in six day long lines to enroll their children in visionary superintendent Richard C Wallace s reinvigorated school Although the historic triangular building was a cornerstone of its North Oakland neighborhood and a showpiece for the city of Pittsburgh officials closed the school in 2008 citing over 50 million in necessary renovations a controversial event that captured national attention Schenley alumnus Jake Oresick tells this story through interviews historical documents and hundreds of first person accounts drawn from a community indelibly tied to the school A memorable important work of local and educational history his book is a case study of desegregation magnet education and the changing nature and legacies of America s oldest public schools

Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05 The Committee's report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and

mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14 19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools
