Life Sciences Memorandum On Rhino Poaching:

The Politics of Nature and Science in Southern Africa Maano Ramutsindela, Giorgio Miescher, Melanie Boehi, 2016-09-12
This book brings together recent and ongoing empirical studies to examine two relational kinds of politics namely the politics of nature i.e. how nature conservation projects are sites on which power relations play out and the politics of the scientific study of nature. These are discussed in their historical and present contexts and at specific sites on which particular human environment relations are forged or contested. This spatio-temporal juxtaposition is lacking in current research on political ecology while the politics of science appears marginal to critical scholarship on social nature. Specifically the book examines power relations in nature related activities demonstrates conditions under which nature and science are politicised and also accounts for political interests and struggles over nature in its various forms. The ecological socio-political and economic dimensions of nature cannot be ignored when dealing with present day environmental issues. Nature conservation regulations are concerned with the management of flora and fauna as much as with humans. Various chapters in the book pay attention to the ways in which nature science and politics are interrelated and also co-constitutive of each other. They highlight that power relations are naturalised through science and science related institutions and projects such as museums botanical gardens wetlands parks and nature reserves.

The Animal Code Danny Crossman, 2011. Illustrates the myriad ways in which humans exploit animals making a compelling case for people to recognise animals' needs and feelings. In a breakthrough concept *The Animal Code* sets out a clear guide for how each of us can treat animals with respect and also help our environment.

Natural History Dioramas Sue Dale Tunnicliffe, Annette Scheersei, 2014-12-05. This book brings together in a unique perspective aspects of natural history dioramas: their history, construction and rationale, interpretation and educational importance from a number of different countries from the west coast of the USA across Europe to China. It describes the journey of dioramas from their inception through development to visions of their future. A complementary journey is that of visitors and their individual sense making and construction of their understanding from their own starting points often interacting with others e.g. teachers, peers, parents as well as media e.g. labels. Dioramas have been hitherto a rather neglected area of museum exhibits but a renaissance is beginning for them and their educational importance in contributing to people's understanding of the natural world. This volume showcases how dioramas can reach a wide audience and increase access to biological knowledge.

Elephant Treaties Rachelle Adam, 2014-01-07. Based on a legal history of international biodiversity treaties from the late nineteenth century to the present, Rachelle Adam argues that today's biodiversity crisis is rooted in European colonial history, especially in the conservation treaties that the colonial powers and their non-governmental counterparts negotiated to protect Africa's big game animals. Reflecting on the colonial past, particularly on efforts to manage the commerce in elephant ivory, Adam sheds light on why more recent attempts to arrest the decline in biodiversity by way of international agreement have failed. This volume will spur a rethinking of such

agreements and trigger a search for alternatives outside of existing international structures *Environmental Crime in the United States* Karen Clark, 2024-07-24 *Environmental Crime in the United States* provides an introduction to the laws that govern environmental crime how these laws are implemented and enforced and the impact they have had since their passing in the twentieth century and their continued applications Environmental crimes such as wildlife trafficking over fishing artisanal mining and deforestation are lucrative contributors to a global illicit trade market and sources of cheap resources for corporations to exploit This book presents a review of U S based laws and regulations regarding such environmental crimes at the state and federal level combined with examples of international convention or trade agreements which can be prosecuted within the United States It examines attempts to modify these laws the exceptions granted to prevent enforcement and the ability of political and social groups to address inefficiencies of the laws or their implementations Both criminal and administrative laws are reviewed to assess how laws governing the environment compare to other areas of law that seek to protect and improve social well being and public health this includes a review of how environmental crimes overlap with general crimes and how these crimes fuel illicit commerce while strengthening international crime syndicates Trends such as the actions taken by non governmental organizations and other entities other than law enforcement to stop environmental crimes such as poaching will be explained with a discussion of how environmental crimes spurn illicit markets and provide lucrative schemes for international crime rings as well as corporations This book will be of great interest to students of environmental crime and justice green criminology environmental conservation natural resource management and environmental law **Columbia University Studies in the Social Sciences** ,1942 *Congressional Record* United States.
