

Question:

The primary colors of light are Red, Green, and Blue. The *secondary colors* of light are formed by adding light sources of these colors together. These secondary colors are:

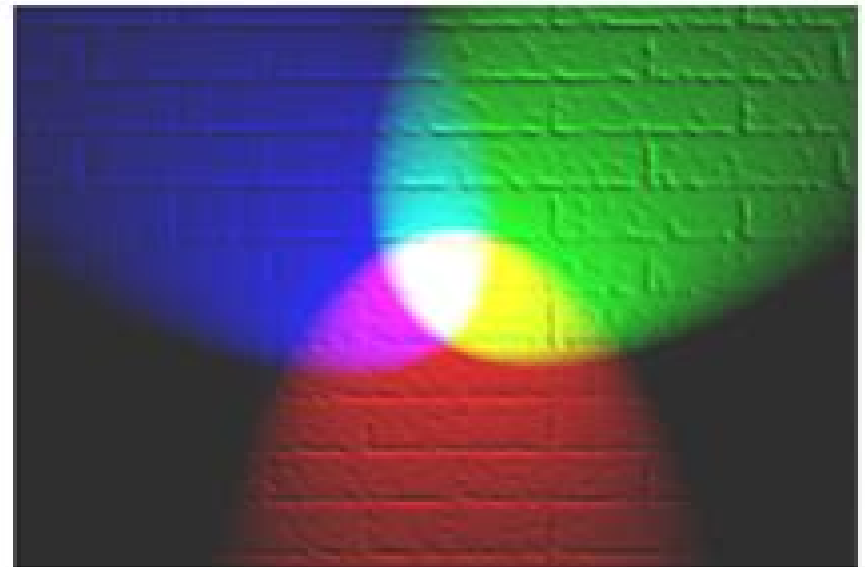

- a. Red, Yellow, Blue
- b. Brown, Cyan, Purple
- c. Black, Gray, White
- d. Yellow, Cyan, Magenta
- e. Red-Green, Green-Blue, Blue-Red

©2015, Richard White, LearnConceptualPhysics.com

Answer:

The correct answer is *d*. Combining Red and Green produces *Yellow* light, combining Green and Blue produces *Cyan* light, and combining Blue and Red produces *Magenta* light.

We say that the colors of light are *additive*, because the secondary colors of light occur when you add multiple sources of light together, as seen here in this photo of multiple light sources shining on a white wall in a dark room. Where the primary colors of light all intersect in the middle, the primary colors add together to produce White, the presence of the entire range of visible light wavelengths.
