Light And Color Physics Alive Questions:

The Language of Physics Elizabeth Garber, 2012-12-06 This study began as an attempt to understand mechanics in the nineteenth century The terms mechanics and mechanical world view were being used as general descriptions of nineteenth century physicists assumptions and interpretations of nature However there were no studies of the particulars of these assumptions or the range and content of these interpretations Rene Dugas work on classical mechanics focused on France The search for the particulars of these forms of mechanics led me to explore precisely what mechanics meant to physicists of a century and more ago However none of Lagrange s Hamilton s or Jacobi s mechanics while elegant fits easily within the history of physics Lagrange reduced mechanics to an exercise in analysis Hamilton and Jacobi used mechanics to explore solutions to partial differential equations They were mathematicians doing mathematics As I went deeper into the matter it became obvious that in the nineteenth century there were two kinds of mechanics each containing a variety of forms one physical the other mathematical There were a group of men using mechanics to understand nature and another group using the equations of mechanics to explore the calculus However when tracing these two traditions back into the eighteenth century physics disappeared altogether

Laboratories of Faith John Warne Monroe,2018-07-05 At a fascinating moment in French intellectual history an interest in matters occult was not equivalent to a rejection of scientific thought participants in s ances and magic rituals were seekers after experimental data as well as spiritual truth A young astronomy student wrote of his quest I am not in the presence or under the influence of any evil spirit I study Spiritism as I study mathematics He did not see himself as an ecstatic visionary but rather as a sober observer For him the darkened room of occult practice was as much laboratory as church In an evocative history of alternative religious practices in France in the second half of the nineteenth and beginning of the twentieth centuries John Warne Monroe tells the interconnected stories of three movements Mesmerism Spiritism and Occultism Adherents of these groups Monroe reveals attempted to modernize faith by providing empirical support for metaphysical concepts Instead of trusting theological speculation about the nature of the soul these believers attempted to gather tangible evidence through Mesmeric experiments s ances and ceremonial magic While few French people were active Mesmerists Spiritists or Occultists large segments of the educated general public were familiar with these movements and often regarded them as fascinating expressions of the modern condition a notable contrast to the Catholicism and secular materialism that prevailed in their culture Featuring eerie spirit photographs amusing Daumier lithographs and a posthumous autograph from Voltaire as well as extensive documentary evidence *Laboratories of Faith* gives readers a sense of what being in a s ance or a secret society ritual might actually have felt like and why these feelings attracted participants While they never achieved the transformation of human consciousness for which they strove these thinkers and believers nevertheless pioneered a way of being religious that has become an enduring part of the Western cultural vocabulary

of Perception E. Bruce Goldstein, 2010 Because of the ease with which we perceive many people see perception as something that just happens However even seemingly simple perceptual experiences involve complex underlying mechanisms which are often hidden from our conscious experience These mechanisms are being investigated by researchers and theorists in fields such as psychology cognitive science neuroscience computer science and philosophy A few examples of the questions posed by these investigations are What do infants perceive How does perception develop What do perceptual disorders reveal about normal functioning How can information from one sense such as hearing be affected by information from another sense such as vision How is the information from all of our senses combined to result in our perception of a coherent environment What are some practical outcomes of basic research in perception These are just a few of the questions this encyclopedia will consider as it presents a comprehensive overview of the field of perception for students researchers and professionals in psychology the cognitive sciences neuroscience and related medical disciplines such as neurology and ophthalmology
