Learning Bio-Micro-Nanotechnology Mel I. Mendelson, 2013-01-04 *Learning Bio-Micro-Nanotechnology* is a primer on micro-nanotechnology that teaches the vocabulary, fundamental concepts and applications of micro-nanotechnology in biology, chemistry, physics, engineering, electronics, computers, biomedicine, microscopy, ethics and risks to humankind. It provides an introduction into the small world with a low fog index, emphasizing the concepts using analogies and illustrations to simplify the non-observables. The chapters have many thinking exercises and summaries with references at the end of each chapter. The questions at the end are divided into Bloom's taxonomy of learning skills and also include team exercises and methods to assess learning. There are many calculations using dimensional analysis according to first principles, but the math is purposely kept at a low level and is used as a means of understanding the concepts. The appendices provide a math review and a glossary of terms. Carefully designed as an easy-to-read textbook and a
