and dream cycles about forests winding paths and sweet briar roses This study focuses on two main ideas Burne Jones's concept of ideal and artificial or magical nature expressed and represented in his drawings and paintings and the way in which he fused his scientific knowledge about nature with some of the symbolism in his paintings

Architecture and Spatial Culture John Peponis, 2024-03-19 Built space supports our daily habits and our membership of communities organizations institutions or social formations Architecture and Spatial Culture argues that architecture matters because it makes the settings of our life intelligible so that we can sustain or creatively transform them As technological and social innovations allow us to overcome spatial constraints to communication cooperation and exchange so the architecture of embodied experience reflects independent cultural choices and human values The analysis of a wealth of examples from urban environments to workplaces and museums shows that built space functions pedagogically inducing us to specific ways of seeing understanding and feeling and supporting distinct patterns of cooperation and life in common Architecture and Spatial Culture is about the principles that underpin the design and inhabitation of space It also serves as an introduction to Space Syntax a descriptive theory used to model the human functions of layouts Thus it addresses architects students of architecture and all those working in disciplines that engage the design of the built environment and its social effects

Systemics of Emergence Gianfranco Minati, Eliano Pessa, Mario Abram, 2006 Within the General Systems Theory GST approach it is possible to focus on emergent systemic properties typically occurring in open adaptive anticipatory and chaotic systems by stressing their specificity and their lack of reducibility into further components In other words emergence underlies the processes allowing the establishing of systemic properties Research on emergence deals with experimental detection modeling and simulation of processes giving rise to the occurrence of macroscopic often complex and unexpected behaviors in complex systems consisting of a large number of components Actually such a theoretical and experimental effort relies on analytical methods such as the ones used in modern theories of self organization collective behaviors phase transitions and artificial life In sum the research on emergence analyzes the engine of GST while GST itself focuses on the general outcomes of this research thus conceptually inducing an inter and trans disciplinary context

SYSTEMICS OF EMERGENCE Research and Development is a volume devoted to exploring the core theoretical and disciplinary research problems of emergence processes from which systems are established It focuses on emergence as the key point of any systemic process This topic is dealt with within different disciplinary approaches indicated by the organization in sections 1 Applications 2 Biology and human care 3 Cognitive Science 4 Emergence 5 General Systems 6 Learning 7 Management 8 Social Systems 9 Systemic Approach and Information Science 10 Theoretical issues in Systemics The Editors and contributing authors have produced this volume to help encourage and widen the work in this area of General Systems Research
