A Primer of Multicast Routing Eric Rosenberg, 2012-01-18 Whereas unicast routing determines a path from one source node to one destination node multicast routing determines a path from one source to many destinations or from many sources to many destinations We survey multicast routing methods for when the set of destinations is static and for when it is dynamic While most of the methods we review are tree based some non tree methods are also discussed We survey results on the shape of multicast trees delay constrained multicast routing aggregation of multicast traffic inter domain multicast and multicast virtual private networks We focus on basic algorithmic principles and mathematical models rather than implementation level protocol details Many historically important methods even if not currently used are reviewed to give perspective on the evolution of multicast routing

Routing for Wireless Multi-Hop Networks Sherin Abdel Hamid,Hossam S. Hassanein,Glen Takahara,2013-01-18 The focus of this brief is to identify what unifies and what distinguishes the routing functions in four wireless multi hop network paradigms The brief introduces a generic routing model that can be used as a foundation of wireless multi hop routing protocol analysis and design It demonstrates that such model can be adopted by any wireless multi hop routing protocol Also presented is a glimpse of the ideal wireless multi hop routing protocol along with several open issues

Multicast Communication in Distributed Systems Mustaque Ahamad,1990 **Multicast Communication** Ralph Wittmann,Martina Zitterbart,2000-06-16 The Internet is quickly becoming the backbone for the worldwide information society of the future Point to point communication dominates the network today however group communication using multicast technology will rapidly gain importance as digital audio and video transmission push technology for the Web and distribution of software updates to millions of end users become ubiquitous Multicast

On-demand Multicast Routing in Ad Hoc Networks

with Unidirectional Links Jorjeta G. Jetcheva, David B. Johnson, 2004 Abstract Many techniques used by routing protocols for ad hoc networks assume that links in the network can be used equally well in both directions between the two endpoint nodes of the link However there are many real world situations in which wireless links may physically work in only one direction resulting in degradation of routing performance in the network In this paper we present the first study of the effect of unidirectional links on the performance of on demand multicast routing protocols for ad hoc networks and present mechanisms that enable such protocols to route efficiently over unidirectional links We evaluate these mechanisms in the context of the Adaptive Demand Driven Multicast Routing protocol ADMR and simulate the extended protocol ADMR U in a wide range of mobile and static network scenarios with unidirectional links In networks with only bidirectional links the unidirectional extensions do not get activated and cause no overhead in networks with unidirectional links ADMR U matches or outperforms ADMR in terms of packet delivery ratio and lowers ADMR s packet overhead

A Reliable and Scalable

Multicast Model Rsm2 Ruchi Gupta, 2013-05 Master s Thesis from the year 2012 in the subject Computer Science Internet New Technologies grade 9 Krishna Engineering College course M TECH Algo Networks language English abstract Abstract Multicasting is the ability of a communication network to accept a single message from an application and to deliver copies of the message to multiple recipients at different locations Our research in Multicasting as to design a Multicast Model which provides reliability scalability with best path for data delivery Reliability means guaranteed Delivery of packets Scalability means capability to serve growing needs In this context a few concepts of Proactive Routing technique are used to make available this model in Infrastructure wireless also Minimum Spanning path and combo casting is used to reduce the cost delay and thus to deliver the packets The main characteristic of RSM2 model is to provide complete multicasting i e at the same time more than one node can act as sender This model provides one to many communications as well as many to many communications The goal of thesis is to design an algorithm describing the function and behavior of Multicast Model RSM2

IP MULTICAST ROUTING Part -3 Ummed Singh, 2023-07-23 IP multicast routing is a technique used in computer networks to efficiently deliver data packets from a single sender to multiple recipients It is specifically designed for

applications where data needs to be distributed simultaneously to a group of interested receivers. In traditional unicast communication, a sender sends packets to individual receivers using their unique IP addresses. This creates a point-to-point connection between the sender and each receiver, resulting in duplicate transmissions if multiple receivers are interested in the same data. Unicast is inefficient for one-to-many or many-to-many communication scenarios. Multicast routing, on the other hand, allows a sender to transmit a single copy of a packet, and network routers replicate and forward it to all interested receivers. This saves network bandwidth and processing resources as the data is distributed only once. Multicast routing uses special IP multicast addresses, typically in the range of 224.0.0.0 to 239.255.255.255, to identify multicast groups. To enable IP multicast routing, routers in the network need to support multicast routing protocols such as Protocol Independent Multicast (PIM). These protocols enable routers to exchange information about multicast groups and determine the optimal path for forwarding multicast traffic. Routers maintain multicast routing tables that specify the outgoing interfaces and next-hop routers for forwarding multicast packets. When a sender wants to send data to a multicast group, it encapsulates the data in a multicast packet and sets the appropriate multicast IP destination address. The routers along the path use the multicast routing tables to determine how to forward the packet to all interested receivers. Receivers interested in receiving multicast data join the multicast group by sending a membership request to the nearest router. The router adds the receiver to the multicast distribution tree, and subsequent multicast packets are forwarded.

Multicast Routing in Computer Networks Mehrdad Parsa, 1998 **Interdomain Multicast Routing** Brian M. Edwards, Leonard A. Giuliano, Brian R. Wright, 2002. This guide to multicasting routing explains the complexities of this growing technology. It provides an overview of the current state of development, analyzes its relevant protocols, and shows how they work together. Real-world examples illustrate key concepts. Specific topics include PIM-SM and MSDP. Any Source and Source-Specific delivery models, building dedicated multicast environments, and IGMP and its various versions. A glossary defines key terms and important acronyms. The authors are engineers and technical writers. Annotation copyrighted by Book News Inc., Portland, OR.

[Deploying Next Generation Multicast-enabled Applications](#) Vinod Joseph, Srinivas Mulugu, 2011-08-20. [Deploying Next Generation Multicast Enabled Applications](#) Label Switched Multicast for MPLS VPNs, VPLS, and Wholesale Ethernet provides a comprehensive discussion of Multicast and MVPN standards, next-generation Multicast-based standards, Multicast Applications, and case studies with detailed configurations. Focusing on three vendors: Juniper, Cisco, and Alcatel-Lucent, the text features illustrations that contain configurations of JUNOS, TiMOS, Alcatel's OS, or Cisco IOS, and each configuration is explained in great detail. Multiple, rather than single vendor configurations, were selected for the sake of diversity, as well as to highlight the direction in which the overall industry is going, rather than that of a specific vendor. Beginning with a discussion of the building blocks or basics of IP Multicast, the book then details applications and emerging trends, including vendor adoptions, as well as the future of Multicast. The book is written for engineers, technical managers, and visionaries engaged in the development of next

generation IP Multicast infrastructures Offers contextualized case studies for illustrating deployment of the Next Generation Multicast technology Provides the background necessary to understand current generation multi play applications and their service requirements Includes practical tips on various migration options available for moving to the Next Generation framework from the legacy

Scalable Multicasting over Next-Generation Internet Xiaohua Tian, Yu Cheng, 2012-07-17

Next generation Internet providers face high expectations as contemporary users worldwide expect high quality multimedia functionality in a landscape of ever expanding network applications This volume explores the critical research issue of turning today's greatly enhanced hardware capacity to good use in designing a scalable multicast protocol for supporting large scale multimedia services Linking new hardware to improved performance in the Internet's next incarnation is a research hot spot in the computer communications field The methodical presentation deals with the key questions in turn from the mechanics of multicast protocols to current state of the art designs and from methods of theoretical analysis of these protocols to applying them in the ns2 network simulator known for being hard to extend The authors years of research in the field inform this thorough treatment which covers details such as applying AOM application oriented multicast protocol to IPTV provision and resolving the practical design issues thrown up in creating scalable AOM multicast service models

Multicast Routing in Internetworks and Extended LANs Stephen E. Deering, Stanford University. Computer Science Department, 1988 Multicasting is used within local area networks to make distributed applications more robust and more efficient The growing need to distribute applications across multiple interconnected networks and the increasing availability of high performance high capacity switching nodes and networks leads us to consider providing LAN style multicasting across an internetwork In this paper we propose extensions to two common internetwork routing algorithms distance vector routing and link state routing to support low delay datagram multicasting We also suggest modifications to the single spanning tree routing algorithm commonly used by link layer bridges to reduce the costs of multicasting in large extended LANs Finally we show how different link layer and network layer multicast routing algorithms can be combined hierarchically to support multicasting across large heterogeneous internetworks RH
