*Handbook of Methods for Designing, Monitoring, and Analyzing Dose-Finding Trials* John O'Quigley, Alexia Iasonos, Björn Bornkamp, 2017-04-27 Handbook of Methods for Designing Monitoring and Analyzing Dose Finding Trials gives a thorough presentation of state of the art methods for early phase clinical trials The methodology of

clinical trials has advanced greatly over the last 20 years and arguably nowhere greater than that of early phase studies. The need to accelerate drug development in a rapidly evolving context of targeted therapies, immunotherapy, combination treatments, and complex group structures has provided the stimulus to these advances. Typically, we deal with very small samples, sequential methods that need to be efficient while at the same time adhering to ethical principles due to the involvement of human subjects. Statistical inference is difficult since the standard techniques of maximum likelihood do not usually apply as a result of model misspecification and parameter estimates lying on the boundary of the parameter space. Bayesian methods play an important part in overcoming these difficulties but nonetheless require special consideration in this particular context. The purpose of this handbook is to provide an expanded summary of the field as it stands and also, through discussion, provide insights into the thinking of leaders in the field as to the potential developments of the years ahead. With this goal in mind, we present:

- An introduction to the field for graduate students and novices.
- A basis for more established researchers from which to build.
- A collection of material for an advanced course in early phase clinical trials.
- A comprehensive guide to available methodology for practicing statisticians on the design and analysis of dose finding experiments.
- An extensive guide for the multiple comparison and modeling MCP Mod dose finding approach.
- Adaptive two stage designs for dose finding as well as dose time response models and multiple testing in the context of confirmatory dose finding studies.

John O. Quigley is a professor of mathematics and research director at the French National Institute for Health and Medical Research based at the Faculty of Mathematics, University Pierre and Marie Curie in Paris, France. He is author of *Proportional Hazards Regression* and has published extensively in the field of dose finding. Alexia Iasonos is an associate attending biostatistician at the Memorial Sloan Kettering Cancer Center in New York. She has over one hundred publications in the leading statistical and clinical journals on the methodology and design of early phase clinical trials. Dr. Iasonos has wide experience in the actual implementation of model-based early phase trials and has given courses in scientific meetings internationally. Björn Bornkamp is a statistical methodologist at Novartis in Basel, Switzerland, researching and implementing dose finding designs in Phase II clinical trials. He is one of the co-developers of the MCP Mod methodology for dose finding and main author of the DoseFinding R package. He has published numerous papers on dose finding, nonlinear models, and Bayesian statistics and in 2013 won the Royal Statistical Society award for statistical excellence in the pharmaceutical industry.

Bailey,2008-04-17 This book should be on the shelf of every practising statistician who designs experiments Good design considers units and treatments first and then allocates treatments to units It does not choose from

a menu of named designs This approach requires a notation for units that does not depend on the treatments applied Most structure on the set of observational units or on the set of treatments can be defined by factors This book develops a coherent framework for thinking about factors and their relationships including the use of Hasse diagrams These are used to elucidate structure calculate degrees of freedom and allocate treatment subspaces to appropriate strata Based on a one term course the author has taught since 1989 the book is ideal for advanced undergraduate and beginning graduate courses Examples exercises and discussion questions are drawn from a wide range of real applications from drug development to agriculture to manufacturing
