Microorganisms to Combat Pollution E. Rosenberg, 2012-12-06 This volume contains material first presented at an international workshop on the Use of Microorganisms to Combat Pollution held in Israel May 10 18 1992 The workshop was sponsored by the Bat Sheva de Rothschild Foundation for the Advancement of Science and included microbiologists biochemists and geneticists from universities environmental agencies and the military Each of the contributors to this volume is an acknowledged expert on the treatment of one or more types of pollution using microorganisms or their enzymes This book differs from most published symposia proceedings in the breadth of coverage of each subject Most of the chapters are divided into three parts a A general presentation of the source and toxicity of the pollutant b a review of the current state of the science on the biodegradation of that pollutant and c the authors unique research experiences on the problem In several examples the authors have presented data from both laboratory studies and field trials Thus the book contains not only the theoretical background on the biodegradation of pollutants but also practical experiences in applying this knowledge to solving significant pollution problems

Proteomics for Studying Foodborne Microorganisms and Their Impact on Food Quality and Human Health Rosa Anna Siciliano, Sergio Uzzau, Maria Fiorella Mazzeo, 2019-10-15 Foodborne microorganisms play a pivotal role in mediating the tight relation between food and human health from a dual perspective In fact notwithstanding the introduction of strict regulations and new technologies to ensure food quality and safety foodborne pathogens continue to cause infections and diseases and represent a serious public health concern while spoilage bacteria can severely affect food quality thus leading to major industry and commercial losses On the other hand probiotics positively affect human health promoting digestion and uptake of dietary nutrients strengthening intestinal barrier function modulating immune response and enhancing antagonism towards pathogens Nowadays proteomics represents a key discipline to perform high throughput studies in the field of food microbiology and enables the most accurate identification of complex networks of proteins involved in the cell adaptation to different growth conditions as well as in beneficial or harmful effects on human health The present eBook offers an overview of the most up to date proteomic methodologies and further assesses the strength of proteomics in exploring different aspects of the foodborne microorganism life style and defining biomarkers of food quality and safety

Microbial Responses to Environmental Changes Jürg B. Logue, Stuart E. G. Findlay, Jérôme Comte, 2016-01-20 Advances in next generation sequencing technologies omics and bioinformatics are revealing a tremendous and unsuspected diversity of microbes both at a compositional and functional level Moreover the expansion of ecological concepts into microbial ecology has greatly advanced our comprehension of the role microbes play in the functioning of ecosystems across a wide range of biomes Super imposed on this new information about microbes their functions and how they are organized environmental gradients are changing rapidly largely driven by direct and indirect human activities In the context of global change understanding the mechanisms that shape microbial communities is pivotal to predict microbial responses to novel selective forces and their implications at the local as well as global scale One of the main features of microbial communities is their ability to react to changes in the environment Thus many studies have reported changes in the performance and composition of communities along environmental gradients However the mechanisms underlying these responses remain unclear It is assumed that the response of microbes to changes in the environment is mediated by a complex combination of shifts in the physiological properties single cell activities or composition of communities it may occur by means of physiological adjustments of the taxa present in a community or selecting towards more tolerant better adapted phenotypes Knowing whether certain factors trigger one many or all mechanisms would greatly increase confidence in predictions of future microbial composition and processes This Research Topic brings together studies that applied the latest molecular techniques for studying microbial composition and functioning and integrated ecological biogeochemical and or modeling approaches to provide a comprehensive and mechanistic

perspective of the responses of micro organisms to environmental changes This Research Topic presents new findings on environmental parameters influencing microbial communities the type and magnitude of response and differences in the response among microbial groups and which collectively deepen our current understanding and knowledge of the underlying mechanisms of microbial structural and functional responses to environmental changes and gradients in both aquatic and terrestrial ecosystems The body of work has furthermore identified many challenges and questions that yet remain to be addressed and new perspectives to follow up on

Molecular Biology of Cancer Lauren Pecorino,2021 Demonstrating how the malfunction of normal molecular pathways and components can lead to cancer this text explores how our understanding of these defective mechanisms can be harnessed to develop new targeted therapeutic agents
