Hormones and the Endocrine System Bernhard Kleine, Winfried G. Rossmanith, 2016-02-11 This book focuses on hormones and on how they are produced in very diverse regions of the body in humans and animals But hormones can be found not only in vertebrates but also in insects shellfish spiders mollusks even at the origin of metazoan diversification and exhibit the same pathways of synthesis The book addresses the different classes of hormones protein peptides hormones steroids and juvenile hormones and hormones like catecholamines thyroid hormones and melatonin It also discusses the types of hormone receptors the majority of which are heptahelical G protein coupled receptors or nuclear receptors Particular attention is paid to the organs where hormones are created with specifics on hormonal production and release while a dedicated chapter details hormonal regulation from very simple to highly complex schemes The remarkable kinetics of hormones production are also shown before the book is rounded out by chapters on evolution in the endocrine system the genetics of endocrine diseases and doping

Hormones Etienne-Emile Baulieu (ed), Paul A. Kelly, 1990-11-30 Endocrinology is a field in which enormous advances have been made in the last decade the rate of discovery of new hormones hormone like molecules receptors and mechanisms of action is continually advancing The development of techniques in immunology and molecular biology has led to the possibility of describing in detail the gene structure of many of the compounds involved in hormonal systems Remarkable homology has been shown between oncogene products and various components of the endocrine network leading to the assertion that deregulation of hormonal function is involved in the generation and or development of cancer We now know that the central nervous system is both a target and a production site of many hormonal products and that hormones neurotransmitters growth factors and immunopeptides all act through similar mechanisms The only second messenger known ten years ago was cAMP today calcium derivatives of membrane phospholipids and protein kinases are also known to be mediators of hormone action The very concept of hormonal systems has been expanded to include not only endocrine secretions but also para and autohormones and their mechanisms of action an understanding of their functions will be central to the immediate future of medicine The discovery of hormonal molecules and endocrine interactions and the subsequent understanding of hormone related pathophysiology has led to the development of new strategies in medical treatment such as fertility control and the management of diabetes
