**The Human Respiratory System** Cassie M. Lawton,2021 The human respiratory system is what makes people able to breathe Without it people wouldn't live for very long This detailed guide to a basic part of human biology explains what the respiratory system is how it works and the key organs used in the process Fun fact boxes vivid photographs and diagrams and accessible language paint a detailed picture of the respiratory system and highlight its importance for human life Readers are also asked to think independently about life science through discussion questions based on the informative text

**The Human Respiratory System** Clara Mihaela Ionescu,2013-08-19 The Human Respiratory System combines emerging ideas from biology and mathematics to show the reader how to produce models for the development of biomedical engineering applications associated with the lungs and airways Mathematically mature but in its infancy as far as engineering uses are concerned fractional calculus is the basis of the methods chosen for system analysis and modelling This reflects two decades worth of conceptual development which is now suitable for bringing to bear in biomedical engineering The text reveals the latest trends in modelling and identification of human respiratory parameters with a view to developing diagnosis and monitoring technologies Of special interest is the notion of fractal structure which is indicative of the large scale biological efficiency of the pulmonary system The related idea of fractal dimension represents the adaptations in fractal structure caused by environmental factors notably including disease These basics are linked to model the dynamical patterns of breathing as a whole The ideas presented in the book are validated using real data generated from healthy subjects and respiratory patients and rest on non invasive measurement methods The Human Respiratory System will be of interest to applied mathematicians studying the modelling of biological systems to clinicians with interests outside the traditional borders of medicine and to engineers working with technologies of either direct medical significance or for mitigating changes in the respiratory system caused by for example high altitude or deep sea environments Biology Québec (Province).
