Subject : Biology 2nd Paper (Creative)

Time : 2 Hours 10 Minutes

Full Marks—40

[ Answer any four of the following questions ]

1.

- a) Define systolic pressure. 1
- b) Which pigment help in respiration and how? 2
- c) Briefly describe the role of X as a storage organ. 3
- d) How X is associated with the production of the main excretory product produced by Y? 4

2.

Fig. M

Fig. N

- a) Write the name of the subphylums under the phylum chordata. 1
  - b) Why Cavia sp. belongs to the class mammalia? 2
  - c) Apply and write which process of symmetry is used for figure M and N. 3
  - d) Both being nonchordate, the organisms of figure M and N belongs into different phylum justify this line. 4
3. Mr. Majid had angina from the last few days. He attended a coronary angioplasty by doctor's suggestion. But after 6 months doctor suggests Mr. Majid for a surgery which will be done by taking the healthy blood vessels from Mr. Majid.
- a) What is a pacemaker? 1
  - b) What do you understand by ECG? 2

**Systems Biology and the Challenge of Deciphering the Metabolic Mechanisms Underlying Cancer** Osbaldo Resendis-Antonio, Christian Diener, 2017-11-23 Since the discovery of the Warburg effect in the 1920s cancer has been tightly associated with the genetic and metabolic state of the cell One of the hallmarks of cancer is the alteration of the cellular metabolism in order to promote proliferation and undermine cellular defense mechanisms such as apoptosis or detection by the immune system However the strategies by which this is achieved in different cancers and sometimes even in different patients of the same cancer is very heterogeneous which hinders the design of general treatment options Recently there has been an ongoing effort to study this phenomenon on a genomic scale in order to understand the causality underlying the disease Hence current omics technologies have contributed to identify and monitor different biological pieces at different biological levels such as genes proteins or metabolites These technological capacities have provided us with vast amounts of clinical data where a single patient may often give rise to various tissue samples each of them being characterized in detail by genomescale data on the sequence expression proteome and metabolome level Data with such detail poses the imminent problem of extracting meaningful interpretations and translating them into specific treatment options To this purpose Systems Biology provides a set of promising computational tools in order to decipher the mechanisms driving a healthy cell s metabolism into a cancerous one However this enterprise requires bridging the gap between large data resources mathematical analysis and modeling specifically designed to work with the available data This is by no means trivial and requires high levels of communication and adaptation between the experimental and theoretical side of research

**Biochemistry and Cell Biology of Ageing: Part I Biomedical Science** J. Robin Harris, Viktor I. Korolchuk, 2019-02-18 This new volume in the Subcellular Biochemistry series will focus on the biochemistry and cellular biology of aging processes in human cells The chapters will be written by experts in their respective fields and will focus on a number of the current key areas of research in subcellular aging research Main topics for discussion are mitochondrial aging protein homeostasis and aging and the genetic processes that are involved in aging There will also be chapters that are dedicated to the study of the roles of a variety of vitamins and minerals on aging and a number of other external factors microbiological ROS inflammation nutrition This book will provide the reader with a state of the art overview of the subcellular aging field This book will be published in cooperation with a second volume that will discuss the translation of the cell biology of aging to a more clinical setting and it is hoped that the combination of these two volumes will bring a deeper understanding of the links between the cell and the body during aging

17 Kursad Turksen, 2022-11-01 Much research has focused on the basic cellular and molecular biological aspects of stem cells. Much of this research has been fueled by their potential for use in regenerative medicine applications which has in turn spurred growing numbers of translational and clinical studies. However, more work is needed if the potential is to be realized for improvement of the lives and well being of patients with numerous diseases and conditions. This book series Cell Biology and Translational Medicine CBTMED as part of Springer Nature's longstanding and very successful Advances in Experimental Medicine and Biology book series has the goal to accelerate advances by timely information exchange. Emerging areas of regenerative medicine and translational aspects of stem cells are covered in each volume. Outstanding researchers are recruited to highlight developments and remaining challenges in both the basic research and clinical arenas. This current book is the 17th volume of a continuing series. **Cell Biology and Translational Medicine, Volume 25**

Kursad Turksen, 2025-08-03 This next volume in the Cell Biology and Translational Medicine series continues to explore the promising applications of stem cells in regenerative medicine. The topics presented in this volume address aspects of stem cell regeneration both in health and disease. The volume looks at the roles of the interactome, secretome, genome stabilizers, epigenetic regulation, organoids, and bioprinting in stem cell biology and regeneration. Additionally, it highlights recent advancements in therapies for eye diseases. A goal of the series continues to be to highlight timely, often emerging topics and novel approaches that can accelerate the utility of stem cells in regenerative medicine. *Cell Biology and Translational Medicine, Volume 8*

Kursad Turksen, 2020-06-09 Much research has focused on the basic cellular and molecular biological aspects of stem cells. Much of this research has been fueled by their potential for use in regenerative medicine applications which has in turn spurred growing numbers of translational and clinical studies. However, more work is needed if the potential is to be realized for improvement of the lives and well being of patients with numerous diseases and conditions. This book series Cell Biology and Translational Medicine CBTMED as part of Springer Nature's longstanding and very successful Advances in Experimental Medicine and Biology book series has the goal to accelerate advances by timely information exchange. Outstanding researchers are recruited to highlight developments and remaining challenges in both the basic research and clinical arenas. This current book is the eight volume of a continuing series. Stem Cell Biology and Regenerative Medicine

Charles Durand, Pierre Charbord, 2022-09-01 The study of stem cell biology is under intensive investigation. Because stem cells have the unique capability to self-renew and differentiate into one or several cell types, they play a critical role in development, tissue homeostasis, and regeneration. Stem cells also constitute promising cell candidates for cell and gene therapy. The aim of this book is to provide readers and researchers with timely and accurate knowledge on stem cell biology and regenerative medicine. This book will cover many topics in the field and is based on conferences given by recognized scientists involved in the international master course on stem cell biology at Sorbonne University in Paris. Encyclopedia of

Bone Biology ,2020-06-26 Encyclopedia of Bone Biology Three Volume Set covers hot topics from within the rapidly expanding field of bone biology and skeletal research enabling a complete understanding of both bone physiology and its relation to other organs and pathophysiology This encyclopedia will serve as a vital resource for those involved in bone research research in other fields that cross link with bone such as metabolism and immunology and physicians who treat bone diseases Each article provides a comprehensive overview of the selected topic to inform a broad spectrum of readers from advanced undergraduate students to research professionals Chapters also explore the latest advances and hot topics that have emerged in recent years including the Hematopoietic Niche and Nuclear Receptors In the electronic edition each chapter will include hyperlinked references and further readings as well as cross references to related articles Incorporates perspectives from experts working within the domains of biomedicine including physiology pathobiology pharmacology immunology endocrinology orthopedics and metabolism Provides an authoritative introduction for non specialists and readers from undergraduate level upwards as well as up to date foundational content for those familiar with the field Includes multimedia features cross references and color images videos *Fetal/Embryonic Hematopoietic Progenitors and Their Impact on Adult Diseases* Silvia Brunelli,Antonella Ellena Ronchi,Charlotta Boiers,Emanuele Azzoni,2021-10-01

**Biochemistry and Cell Biology of Ageing: Part II Clinical Science** J. Robin Harris,Viktor I. Korolchuk,2019-03-19 This volume of the subcellular Biochemistry series will attempt to bridge the gap between the subcellular events that are related to aging as they were described in the first volume of this set of two books and the reality of aging as this is seen in clinical practice All chapters will start from the biochemistry or cell biology where the data is available and work up towards the understanding that we have of aging in the various areas that are related to the subject Key focus points for this volume are nutrition external factors and genetics on aging There will also be chapters that will focus on various organs or tissues in which aging has been well studied like the eyes the muscles the immune system and the bones The aim of the book project and the book project that is published in concert with this volume is to bring the subcellular and clinical areas into closer contact **Hematopoiesis: Learning from in vitro and in vivo Models** Jon Frampton,Anskar Y. H. Leung,Xiaotian Zhang,Jianwei Wang,Yiyue Zhang,2022-04-28 **Principles of Bone Biology** John P. Bilezikian,T. John Martin,Thomas L. Clemens,Clifford Rosen,2019-08-22 Preface from the first edition 1996 The world of modern science is undergoing a number of spectacular events that are redefining our understanding of ourselves As with any revolution we should take stock of where we have been where we are and where we are going Our special world of bone biology is participating in and taking advantage of the larger global revolution in modern science we assembled experts from all over the world and asked them to focus on the current state of knowledge and the prospects for new knowledge in their area of expertise To this end Principles of Bone Biology was conceived John P Bilezikian Lawrence G Raisz Gideon A Rodan Praise for the previous edition Students teachers and practitioners will benefit from reading it and investigators will use it as a reference work it will certainly be

consulted frequently The New England Journal of Medicine For over two decades Big Gray has been the go to repository of knowledge in the disciplines related to bone and mineral metabolism The fourth edition is a must have for students new to the field young investigators at the graduate or postgraduate level beginning their research careers established scientists who need to keep up with the changing nature of the field looking to enrich their own research programs or who are changing their career direction clinicians who want ready access to up to date relevant basic science This new edition builds on the successful formula from previous editions taking the reader from the basic elements of fundamental research to the most sophisticated concepts in therapeutics Principles of Bone Biology Fourth Edition provides the most comprehensive authoritative reference on the study of bone biology and related diseases Bone research continues to generate enormous attention due to the broad public health implications of osteoporosis and related bone disorders This classic fully updated two volume reference is designed for anyone involved in the study of bone biology Provides a one stop shopping paradise Anything you want to find about bone biology is here and written by the world s experts THE essential resource for anyone involved in the study of the skeleton and metabolic bone diseases Covers everything from the basic scientific concepts to the underlying principles of therapeutics and management Allows readers to easily search and locate information quickly in the online format Volumes include Basic Principles Molecular Mechanisms of Metabolic Bone Disease Pharmacological Mechanisms of Therapeutics Methods in Bone Research *Biology in Stem Cell Niche* Kursad Turksen,2015-10-15 This comprehensive volume explores functions pathologies and applications of stem cells in relation to the niches in which they develop Ten chapters cover the subject in depth from a historical perspective through signaling hormonal control quiescence biomimetics epigenetics engineering strategies for emulating tumorigenesis and more The chapter authors represent a broad range of international expertise and perspectives This installment of the popular Stem Cell Biology and Regenerative Medicine series delivers authoritative international perspectives on this rapidly growing field Biology of Stem Cell Niche is an ideal complementary volume to Tissue Specific Stem Cell Niche and Adult Stem Cells Second Edition and will be invaluable to clinicians and researchers working with stem cells as well as to postgraduate trainees who are studying them

*Biology of Mesenchymal Stromal Cells -Emerging New Concepts to Improve Function and Scalability* Tokiko Nagamura-Inoue,Willem Fibbe ,Keiya Ozawa,2024-10-28 Human mesenchymal stromal cells MSCs can be harvested from many tissues including bone marrow BM cord blood CB adipose tissue umbilical cord UC placenta and others In recent years there has been an overwhelming interest in MSC as reflected in the number of reports regarding their characterization biological properties and clinical application One of the specific areas of research involves the characterization of MSCs derived from different sources as well as the potential differences between them More recently reports have been published on derivatives from MSCs such as extracellular vesicles EVs exosomes and mitochondria but their characterization mechanisms of action in immunomodulatory functions and regeneration aspects have not been fully elucidated Genome
