Computational Engineering of Historical Memories Andrea Nanetti,2022-09-26

Nanetti outlines a methodology for deploying artificial intelligence and machine learning to enhance historical research. Historical events are the treasure of human experiences, the heritage that societies have used to remain resilient and express their identities. Nanetti has created and developed an interdisciplinary methodology supported by practice-based research that serves as a pathway between historical and computer sciences to design and build computational structures that analyse how societies create narratives about historical events. This consilience pathway aims to make historical memory machine understandable. It turns history into a computational discipline through an interdisciplinary blend of philological accuracy, historical scholarship, history-based media projects, and computational tools. Nanetti presents the theory behind this methodology from a humanities perspective and discusses its practical application in user interface and experience. An essential read for historians and scholars working in the digital humanities.

The Clocks Are Telling Lies Scott Alan Johnston, 2022-01-15 Until the nineteenth century all time was local time On foot or on horseback it was impossible to travel fast enough to care that noon was a few minutes earlier or later from one town to the next The invention of railways and telegraphs however created a newly interconnected world where suddenly the time differences between cities mattered The Clocks Are Telling Lies is an exploration of why we tell time the way we do demonstrating that organizing a new global time system was no simple task Standard time envisioned by railway engineers such as Sandford Fleming clashed with universal time promoted by astronomers When both sides met in 1884 at the International Meridian Conference in Washington DC to debate the best way to organize time disagreement abounded If scientific and engineering experts could not agree how would the public Following some of the key players in the debate Scott Johnston reveals how people dealt with the contradictions in global timekeeping in surprising ways from zealots like Charles Piazzi Smyth who campaigned for the Great Pyramid to serve as the prime meridian to Maria Belville who sold the time door to door in Victorian London to Moravian town and other Indigenous communities that used timekeeping to fight for autonomy Drawing from a wide range of primary sources The Clocks Are Telling Lies offers a thought provoking narrative that centres people and politics rather than technology in the vibrant story of global time telling

Foolproof Greg Ip, 2015-10-08 Why anti lock brakes make us drive faster Why saving money can lead to financial crises How football helmets make the game more dangerous Why letting forest fires burn can be safer than putting them out We have learned a staggering amount about human nature and disaster yet we are continually unprepared for car crashes floods and financial crises Partly this is because the very success we ve had making life safer enables us to take more extreme different risks As our cities transport systems and financial markets become more interconnected and complex so does the potential for disaster How do we stay safe Should we What if our attempts are exposing us even more to the very risks we are trying to avoid What if acceptance of danger ultimately makes us more secure and prosperous Is there such a thing as foolproof In this fascinating account of risk taking and crisis Greg Ip presents a macro theory of human nature and disaster that explains how we can keep ourselves safe in our increasingly dangerous world

A caminho da guerra Graham Allison, 2020-09-11 Historiador analisa o impacto do crescimento da China sobre os Estados Unidos e a ordem mundial e explica as verdadeiras possibilidades de esses pa ses entrarem em guerra A tens o crescente entre China e Estados Unidos vem alarmando o mundo Conforme esse panorama se delineia fica cada vez mais n tido que os dois pa ses parecem a caminho da guerra e que as consequ ncias disso ser o mundialmente catastr ficas Essa sensa o de inevitabilidade foi descrita como a Armadilha de Tuc ides Em seu tempo o historiador da Gr cia Antiga que

deu nome expresso observou que a ascensão de Atenas e o consequente temor instilado em Esparta tornaram a guerra inevitável. Desde então a armadilha descrita por Tucídides passou a designar o momento em que uma potência em ascensão ameaça tomar o lugar do poder dominante. Ao longo dos últimos cinco séculos tais condições ocorreram 16 vezes e em 12 delas uma guerra eclodiu. Hoje enquanto uma China irrefreável desafia a já consolidada supremacia dos Estados Unidos essas nações correm o risco de protagonizar um conflito de repercussão devastadora. As promessas de seus presidentes de tornar seus países grandes novamente são a base da política externa de ambos e oferecem um vislumbre sombrio da construção do destino comum. Conflitos comerciais, ataques cibernéticos, a crise da Coreia ou um acidente marítimo podem facilmente transformar os constantes desentendimentos entre as duas potências em uma guerra declarada. Em A caminho da guerra o professor de Harvard Graham Allison alia história aos fatos atuais para explicar o mecanismo eterno da Armadilha de Tucídides. Ao analisar o impacto do crescimento da China sobre os Estados Unidos e sobre a ordem mundial, Graham esmiúça as difíceis medidas que poderiam ser adotadas a fim de impedir um desastre de magnitude planetária. **Building Science Series**, 1970 **N3 Building and Civil Technology**, 2020 Applied Building Science Joseph W.
