

Evidences for Evolution Lab

Introduction:

Unfortunately, we cannot repeat nature's experiments of evolution; however there is a vast amount of evidence, mostly indirect, to support the theory. If modern organisms descended from ancestral organisms then we should see similarities between organisms in the fossil record. Also, we should be able to see more similarities amongst different types of organisms that live today if they have evolved from a common ancestor more recently. Each part of this lab will explore one of the major sources of evidence that support the theory of evolution.

PART A: The Fossil Record and the Age of the Earth

Fossils are the remains of long-dead organisms that have escaped decay and become part of the Earth's crust. Thus, fossils are evidence of organisms that lived long ago. Paleontologists, scientists who study ancient life, use fossils to understand events that happened long ago. They use fossils to determine the kinds of organisms that lived during the past and sometimes to learn about their behaviour. For example, fossil bones and teeth can indicate the size of animals, how they moved, and what they ate. Paleontologists also study fossils to gain knowledge about ancient climate and geography. For instance, if they find a fossil which resembles a present-day plant that lives in a mild climate, they may reason that the ancient environment was also mild.

Use the information above and at Station A to answer the following questions:

1. Define fossil:

The remains of an animal or plant that has been preserved in the earth's crust.

2. What normal processes must permanently stop for fossils to form and how can this happen?

Decay. This can happen if the remains are isolated from the air or water and decomposing microbes are prevented from breaking them down.

3. Explain how each of the following preservation processes can result in formation of fossils:

- a. **Amber** -Gum from conifers traps insects and then hardens.
- b. **Tar Pit**-Animals fall into and are trapped in mixture of tar and sand.

4. How could fossils be used to determine an animal's diet?

The fossil teeth used to determine an animal's diet, because teeth are directly involved in the mechanical breakdown of food.

5. **Proboscideans'** ancestors were small and trunkless. Why did the group become larger as they evolved?

The group became larger because their descendants invaded all continents except Antarctica and Australia.

6. What is meant by a **transitional fossil**?

Transitional fossil is a mixture of traits that are found in two different, but related, taxonomic groups.

7. Recent fossil discoveries support the idea that modern birds evolved from one of the groups of dinosaurs near the end of the **Mesozoic Era**. Observe the picture of the fossil **Archaeopteryx**, a prehistoric bird.

List 2 **Reptilian** features and 2 **Avian** features:

Reptilian-1. Breastbone is small and lacks a keel. 2. Forelimb has 3 functional fingers with grasping claws.

Avian-1. Impressions of feathers attached to the forelimb. 2. Incomplete fusion of the lower leg bones.

,1998 Memory, Amnesia, and the Hippocampal System Neal J. Cohen,Howard Eichenbaum,1993 In this sweeping synthesis Neal J Cohen and Howard Eichenbaum bring together converging findings from neuropsychology neuroscience and cognitive science that provide the critical clues and constraints for developing a more comprehensive understanding of memory Specifically they offer a cognitive neuroscience theory of memory that accounts for the nature of memory impairment exhibited in human amnesia and animal models of amnesia that specifies the functional role played by the hippocampal system in memory and that provides further understanding of the componential structure of memory The authors central thesis is that the hippocampal system mediates a capacity for declarative memory the kind of memory that in humans supports conscious recollection and the explicit and flexible expression of memories They argue that this capacity emerges from a representation of critical relations among items in memory and that such a relational representation supports the ability to make inferences and generalizations from memory and to manipulate and flexibly express memory in countless ways In articulating such a description of the fundamental nature of declarative representation and of the mnemonic capabilities to which it gives rise the authors theory constitutes a major extension and elaboration of the earlier procedural declarative account of memory Support for this view is taken from a variety of experimental studies of amnesia in humans nonhuman primates and rodents Additional support is drawn from observations concerning the neuroanatomy and neurophysiology of the hippocampal system The data taken from divergent literatures are shown to converge on the central theme of hippocampal involvement in declarative memory across species and across behavioral paradigms

Understanding Evolution Kostas Kampourakis,2014-04-03 Bringing together conceptual obstacles and core concepts of evolutionary theory this book presents evolution as straightforward and intuitive *Teaching about Scientific Origins* Leslie Sandra Jones,Michael Jonathan Reiss,2007 Persistent resistance to the teaching of evolution has so drastically impacted science curricula that many students finish school without a basic understanding of a theory that is a fundamental component of scientific literacy This evolution creationism controversy has crippled biological education in the United States and has begun to spread to other parts of the world This book takes an educational point of view that respects both the teaching of evolution and religious beliefs Authors from different academic traditions contribute to a collection of perspectives that begin to dismantle the notion that religion and science are necessarily incompatible *Trends in Teaching Experimentation in the Life Sciences* Nancy J. Pelaez,Stephanie M. Gardner,Trevor R. Anderson,2022-05-11 This book is a guide for educators on how to develop and evaluate evidence based strategies for teaching biological experimentation to thereby improve existing and develop new curricula It unveils the flawed assumptions made at the classroom department and institutional level about

what students are learning and what help they might need to develop competence in biological experimentation Specific case studies illustrate a comprehensive list of key scientific competencies that unpack what it means to be a competent experimental life scientist It includes explicit evidence based guidelines for educators regarding the teaching learning and assessment of biological research competencies The book also provides practical teacher guides and exemplars of assignments and assessments It contains a complete analysis of the variety of tools developed thus far to assess learning in this domain This book contributes to the growth of public understanding of biological issues including scientific literacy and the crucial importance of evidence based decision making around public policy It will be beneficial to life science instructors biology education researchers and science administrators who aim to improve teaching in life science departments Chapters 6 12 14 and 22 are available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com)
