Plants Roots - Buttress Roots
Plants absorb water and minerals from the soil through their roots. The roots of some plants, like the fig tree, are very large and spread out over a wide area. These roots are called buttress roots. They provide extra support for the tree and help it absorb more water and minerals.

Recent Advances in Biotechnological Applications of Microbial Secondary Metabolites Paola Angelini, Ajay Kumar, Vijay K. Sharma, Ragini Bodade, 2024-10-18 Microbial Secondary Metabolites SMs are low molecular weight compounds produced during secondary metabolism The majority are produced by specific groups of microorganisms under environmental stress conditions including nutrient deficiencies pH temperature and metal ions concentrations Many reported SMs are categorized as antibiotics pigments toxins pheromones enzyme inhibitors antitumor agents immunomodulators receptor antagonists and agonists animal and plant growth promoters and pesticides Their synthesis is regulated by a group of genes residing on the chromosomal DNA plasmid DNA known as Biosynthetic Gene Clusters BGCs Moreover their metabolic pathways are complex and controlled by many regulating factors thus needing to be studied from an enzymatic regulatory and differentiation perspective Due to their structural diversity SMs have a wide range of biotechnological applications in the agricultural health industrial and environmental sectors Hence they have a great potential to positively impact health nutrition and the economy on a global scale The main goal of this Research Topic is to highlight current research exploring microbial SMs and their potential future applications in the agricultural pharmaceutical industrial and environmental sectors Microbes have proved to be a reliable source of SM production with high structural diversity and product yields However there are several challenges to reliable SM production including the regulation of cultural conditions development of industrial strains and product yield Such challenges can be mitigated to some extent through exploring non conventional microbial sources chemical and biological modifications metagenomics and genome mining approaches Additionally genetic engineering techniques can improve microbial strain characteristics product yield and generate novel molecules Furthermore microbial co culture methods have been praised for increasing the yields and improving the structural diversity of the product as well as advances in computational strategies enabling the identification of BGCs in genome sequences and the prediction of chemical product structures Nevertheless there remains significant potential to identify novel and industrially important SMs

Learning from the COVID-19 Pandemic RC Sobti, Aastha Sobti, 2023-08-24 COVID 19 was first identified in Wuhan City in December 2019 and spread

throughout Hubei Province and other parts of China After causing significant morbidity and mortality in China by February 2020 it had spread to numerous other countries infecting millions of people and causing a large number of deaths across the world The COVID 19 pandemic put a burden on almost all areas of the world including healthcare systems education industry travel etc The pandemic revealed the vulnerability of the world s healthcare systems and affected healthcare personnel significantly The virus is able to attack not only the respiratory tract but almost all the organs including the brain Impacts on gut biota have also been noticed The virus has caused both morbidity and mortality in humans without any geographical cultural or religious barriers The emergence of new variants due to mutations in the virus has aggravated the problem While the delta variant brought a second wave and killed a large number of people due to various factors such as lowering of saturated oxygen in blood and other physiological emergencies the omicron variant proved to be less lethal Though the pandemic has subsided the emergence of the subvariants BA1 and BA2 and now their hybrids has started to increase the number of cases at exponential levels and has forced new lockdown measures in places such as China As the conditions laid down to combat the pandemic have been relaxed the virus may reach other countries and cause additional countries to resort to lockdown again COVID 19 became the focus of the scientific community with the aim of developing new drugs repurposing available drugs to be used against the virus and developing a series of vaccines in a short time The mild effect of omicron might have been due to the extensive vaccination programmes carried out in various countries However there is genuine fear that newly emerging variants may evade the immune system and cause damage to the body This book highlights the impact of COVID 19 on science industry and healthcare systems The chapters included in the volume come from dedicated experts belonging to basic sciences biotechnology pharmaceutical sciences and other fields of sciences These include discussions on how the virus evolves and attacks various organs in the body A separate chapter explains the emergence of various strains of virus The preparedness of hospitals and healthcare workers as well as different agencies such as DRDO to face the challenges posed by virus is also discussed The way scientists and technologists developed new techniques to detect and control the virus have also been highlighted including a chapter on the development of vaccines to control the pandemic This book is a key resource for students teachers medical personnel administrators and the public as a whole
