Cell Death Regulation in Pathology , 2025-09-24 Regulated cell death RCD stands at the crossroads of cellular integrity and disease orchestrating essential processes that preserve tissue homeostasis guide development and dictate responses to stress Far from being a passive consequence of damage RCD is an actively regulated and highly conserved mechanism one whose dysregulation fuels the pathogenesis of cancer chronic inflammation neurodegenerative diseases and muscular atrophy Apoptosis the classical and best characterized form of RCD ensures the silent clearance of compromised cells Yet its evasion of malignancies has propelled a paradigm shift toward uncovering non apoptotic death modalities Ferroptosis driven by iron dependent lipid peroxidation has emerged as a potent vulnerability in apoptosis resistant cancers such as acute myeloid leukemia with p53 serving as a critical modulator of this process Meanwhile the recent identification of cuproptosis triggered by intracellular copper accumulation has opened new investigative avenues in disorders such as skeletal muscle atrophy highlighting the pathological relevance of metal dyshomeostasis RCD is not an isolated event it profoundly shapes and is shaped by the immune landscape Innate sensors

such as NLRs dictate inflammasome activation and the immunogenic profile of dying cells influencing disease tolerance and immune surveillance Central transcription factors including MYC and p53 act as master integrators of death and proliferation signals Heat shock proteins particularly HSP70 safeguard cancer stem cell survival and modulate apoptotic thresholds From a translational perspective targeting RCD pathways represents a high value strategy across disease domains In cancer combining radiotherapy with ferroptosis inducers offers new hope against resistance In neurology modulating the endocannabinoid system and autophagy may confer neuroprotection Mitochondrial dysfunction at the core of multiple RCD forms underscores the centrality of metabolic control in cell fate RCD is not merely a biological endpoint it is a therapeutic frontier

Research Awards Index, *Systems Biology* Isidore Rigoutsos, Gregory Stephanopoulos, 2006-09-14 The advent of genome sequencing and associated technologies has transformed biologists ability to measure important classes of molecules and their interactions This expanded cellular view has opened the field to thousands of interactions that previously were outside the researchers reach The processing and interpretation of these new vast quantities of interconnected data call for sophisticated mathematical models and computational methods Systems biology meets this need by combining genomic knowledge with theoretical experimental and computational approaches from a number of traditional scientific disciplines to create a mechanistic explanation of cellular systems and processes *Systems Biology I Genomics and Systems Biology II Networks Models and Applications* offer a much needed study of genomic principles and their associated networks and models Written for a wide audience each volume presents a timely compendium of essential information that is necessary for a comprehensive study of the subject The chapters in the two volumes reflect the hierarchical nature of systems biology Chapter authors world recognized experts in their fields provide authoritative discussions on a wide range of topics along this hierarchy Volume I explores issues pertaining to genomics that range from prebiotic chemistry to noncoding RNAs Volume II covers an equally wide spectrum from mass spectrometry to embryonic stem cells The two volumes are meant to provide a reliable reference for students and researchers alike

Endoplasmic Reticulum and Its Role in Tumor Immunity Paul Eggleton, Marek Michalak, 2016-02-16 The endoplasmic reticulum ER is an organelle crucial to many cellular functions and processes including the mounting of T cell immune responses Indeed the ER has a well established central role in anti tumor immunity Perhaps best characterized is the role of the ER in the processing of antigen peptides and the subsequent peptide assembly into MHC class I and II molecules Such MHC tumor derived peptide complexes are pivotal for the correct recognition of altered self or viral peptides and the subsequent clonal expansion of tumor reactive T cells In line with the role of the ER in immunity tumor associated mutations in ER proteins as well as ER protein content and localization can have both deleterious and advantageous effects on anti tumor immune responses For instance loss of function of ER aminopeptidases that trim peptides to size for MHC alter the MHC class I peptide repertoire thereby critically and negatively affecting T cell recognition On the other hand altered localization of ER proteins can have immune promoting effects

Specifically translocation of certain ER proteins to the cell surface has been shown to promote anti tumor T cell immunity by directing uptake of apoptotic tumor cells to professional antigen presenting cells thereby facilitating anti tumor T cell immunity These selected examples highlight a diverse and multi faceted role of the ER in anti tumor immunity Molecular biological insights from the past decade have uncovered that ER components may affect tumor immunity and have invoked a variety of follow up questions For instance how and why are ER proteins over expressed in tumors How do nucleotide and somatic mutations in ER chaperones processing machinery affect the MHC peptide complex and tumor cell immunogenicity How do ER proteins translocate to the cell surface What if any is the potential role of extracellular ER protein in tumor immunotherapy vaccines and can they be delivered to the tumor cell surface by photodynamic therapy anthracyclines or by other means In this special research topics issue we present basic and clinical research reports covering many aspects of ER proteins in cancer recognition by the immune system therapy and drug development We also present reports new insights into ER stress signalling and homeostasis in immunogenic cell death in cancer the effect of parasitic ER proteins on tumour growth ER protein regulation of angiogenesis A comprehensive series of articles highlight our understanding of an expanding avenue of tumour immunology and therapeutic development which exploit a collection of proteins within the ER that are not obvious candidates for immunity against tumors

Mitochondrial Biology and Experimental Therapeutics Paulo J. Oliveira, 2018-03-21 This book addresses the therapeutic strategies to target mitochondrial metabolism in diseases where the function of that organelle is compromised and it discusses the effective strategies used to create mitochondrial targeted agents that can become commercially available drug delivery platforms The consistent growth of research focused in understanding the multifaceted role of mitochondria in cellular metabolism controlling pathways related with cell death and ionic redox regulation has extended the research of mitochondrial chemical biological interactions to include various pharmacological and toxicological applications Not only does the book extensively cover basic mitochondrial physiology but it also links the molecular interactions within these pathways to a variety of diseases It is one of the first books to combine state of the art reviews regarding basic mitochondrial biology the role of mitochondrial alterations in different diseases and the importance of that organelle as a target for pharmacological and non pharmacological interventions to improve human health The different chapters highlight the chemical biological linkages of the mitochondria in context with drug development and clinical applications
