for multi agent system app cations On the one hand the agent paradigm is successfully employed in those applications where  
autonomous loosely coupled heterogeneous and distributed systems need to interoperate in order to achieve a common goal  
On the other hand ontologies have established themselves as a powerful tool to enable kno edge sharing and a growing  
number of applications have bene ted from the use of ontologies as a means to achieve semantic interoperability among  
heterogeneous distributed systems In principle ontologies and agents are a match made in heaven that has failed to happen  
What makes a simple piece of software an agent is its ability to communicate in a social environment to make autonomous  
decisions and to be proactive on behalf of its user Communication ultimately depends on und standing the goals preferences
