*Advances in Sensitivity Analysis and Parametric Programming* Tomas Gal, H.J. Greenberg, 2012-12-06 The standard view of Operations Research Management Science OR MS dichotomizes the field into deterministic and probabilistic nondeterministic stochastic subfields. This division can be seen by reading the contents page of just about any OR MS textbook. The mathematical models that help to define OR MS are usually presented in terms of one subfield or the other. This separation comes about somewhat artificially as academic courses are conveniently subdivided with respect to prerequisites. An initial overview of OR MS can be presented without requiring knowledge of probability and statistics. Text books are conveniently divided into two related semester courses with deterministic models coming first. Academics tend to specialize in one subfield or the other and practitioners also tend to be expert in a single subfield. But no matter who is

involved in an OR MS modeling situation deterministic or probabilistic academic or practitioner it is clear that a proper and correct treatment of any problem situation is accomplished only when the analysis cuts across this dichotomy Student Solutions Manual for Use with Investments, Sixth Edition [by] Zvi Bodie, Alex Kane, Alan J. Marcus R.
