

## Sheep Brain Dissection

### Objectives:

1. List and describe the principal structures of the sheep brain
2. Identify important parts of the sheep brain in a preserved specimen

Materials: Dissection tools and trays, lab gloves, preserved specimen

### External Sheep Brain:

The sheep brain is quite similar to the human brain except for proportion. The sheep has a smaller cerebellum. Also the sheep brain is oriented anterior to posterior whereas the human brain is superior to inferior.

1. The tough outer covering of the sheep brain is the **dura mater**, one of three meninges (membranes) that cover the brain. You will need to remove the dura mater to see most of the structures of the brain. Remove the dura mater while leaving other structures intact. ☐
2. The most prominent feature of the brain is the **cerebrum** - which is divided into nearly symmetrical **left and right hemispheres** by a deep longitudinal **fissure**. ☐
3. The surface of the cerebrum is covered with large folds of tissue called **gyri**. The grooves between the gyri are **sulci**. The deeper sulci are often termed **fissures**. The fissures are used as landmarks to divide the surface of the cerebrum (the **cerebral cortex**) into regions:  
  
\* Locate each of the lobes: **frontal lobes** / **parietal lobes** / **occipital lobes** / **temporal lobes**
4. The smaller, rounded structure at the back of the brain is the **cerebellum**. The cerebellum has smaller gyri that are roughly parallel to one another. Compare the gyri of the cerebellum to that of the cerebrum. Removing the dura mater from the cerebellum can be tricky business. Look for areas on the side of the brain that you can snip to peel the dura mater off. ☐
5. Turn the brain over so that the cerebrum is down. The most prominent structure on the ventral side of the brain is the optic chiasma, where the two **optic nerves** cross over each other and form an "X" shape. Locate the **optic chiasma**. ☐
6. The **pituitary gland** is a large round structure under the chiasma. If you removed this area with the dura mater, you may need to replace it to see the chiasma and pituitary gland. ☐
7. Toward the front of the brain are two prominent round structures, the olfactory bulbs. ☐
8. Toward the back of the brain, in order from the optic chiasma are bulges that indicate the **midbrain**, the **pons**, and the **medulla**. ☐
9. Just behind the optic chiasma is a raised area or bump that indicates the **infundibulum** (also known as the **pituitary stalk**). This is where the pituitary was attached to (which was probably removed with the dura mater). ☐
10. **Oculomotor nerves** may be visible to each side of the pituitary gland (or stalk). Or in some cases you may find them stuck to the dura mater that you removed with the pituitary gland. ☐

Dying for a Hamburger Murray Waldman,Marjorie Lamb,2025-06-25 One in ten people older than sixty five and nearly half of those older than eighty five have Alzheimer s disease It s widely accepted nowadays that memory loss comes with age Alzheimer s currently robs at least 15 million people of their identity worldwide This book makes the controversial claim that eating meat may contribute to the development of the disease In Dying for a Hamburger Dr Murray Waldman and Marjorie Lamb draw upon documentary evidence historical testimony and inspired speculation to suggest that Alzheimer s is a new disease elderly people did not experience symptoms of dementia in such alarming numbers in the past began appearing after modern meat production techniques were introduced has soared in nations where these techniques are used hardly exists in cultures where meat consumption is low has been attributed to many deaths that are actually the human equivalent of mad cow disease They present startling evidence that Alzheimer s may be part of a family of diseases linked to malformed proteins known as prions They hypothesize that the conditions that allow these brain disorders to be triggered are similar They propose that mad cow its human equivalent Creutzfeldt Jakob disease CJD other encephalitic diseases and Alzheimer s may have a common antecedent We know that a form of CJD is transmitted to humans who eat contaminated beef And we are becoming increasingly aware of the need to monitor the meat supply closely to avoid a repetition of the mad cow scare in Great Britain But suppose that Alzheimer s also involves prions the evidence that points in this direction is growing And suppose that Alzheimer s is also associated with tainted meat This conclusion seems far fetched at first In this compelling book the authors come to a

frightening conclusion about our seemingly insatiable hunger for hamburgers Destined to provoke heated argument this book on the prevention of Alzheimer s is definitely food for thought      **Clinical Neurosurgery** Guy M.
