Durability Testing of Tank Track Rubber Compounds Under Cyclic Loading, 1987 The mechanical durability of three tank track rubber compounds designated as 15TP 14AX 15NAT 25A and 15TP R were evaluated within the framework of cycle shifted failure envelop CSFE model for rupture of carbon black filled rubbers It was found that while the CSFE model is imperfect it serves as a useful framework for evaluating the mechanical durability of the rubber compounds The three

rubber compounds could be ranked for durability in creep and in zero tensile sinusoidal fatigue The results show that the ranking varies with test conditions e g temperature test frequency etc New results are presented showing violation of the classical failure envelope model Keywords Cycle shifted failure envelope Durability testing Failure modeling Rubber compounds Tank track pads Tanks combat vehicles *Approval Tests of "flexelite" Light-weight Synthetic Rubber Flexible Fuel Tanks* I. I. McNaughtan,1949 **Electrical Properties of Tank Pad Rubber: A Feasibility Study** ,1985 The purpose of this work is to investigate the feasibility of electrical measurements for improving the life and reliability of tank track pad rubber Immediate goals are to determine if electrical measurements can be used to distinguish various types of rubbers used in tank track pads to obtain more fundamental information about the electrical properties of the rubber and to make recommendations The most important results were related to the effects of pressure on resistance and resistance relaxation Each of the six different compositions measured had its own resistance increase relaxation fingerprint Samples of the same composition had nearly identical fingerprints A major asset of the pressure resistance relaxation measurement is that it couples mechanical and electrical properties of the rubber A correlation between electrical relaxation and certain mechanical parameters such as creep and set recovery was made The resistance relaxation phenomena can be attributed to various bond breakages and repairs which can be also be related to mechanical properties Originator supplied keywords include Tank Track Pads Rubber Reliability Electrical Properties Rubber-proofed Fabrics for Riveted Tanks ,1936 *Rubber Compound Development for Improved Military Tank Track.
