## Student Exploration: Building DNA

**Vocabulary:** double helix, DNA, enzyme, lagging strand, leading strand, mutation, nitrogenous base, nucleoside, nucleotide, replication

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

**DNA** is an incredible molecule that forms the basis of life on Earth. DNA molecules contain instructions for building every living organism on Earth, from the tiniest bacterium to a massive blue whale. DNA also has the ability to **replicate**, or make copies of itself. This allows living things to grow and reproduce.

1. Look at the DNA molecule shown at right. What does it look like?

\_\_\_\_\_

This shape is called a **double helix**.

2. Based on this picture, how do you think a DNA molecule makes a copy of itself? (Hint: Look at the bottom two "rungs" of the ladder.)

### Gizmo Warm-up

The **Building DNA Gizmo™** allows you to construct a DNA molecule and go through the process of DNA replication. Examine the components that make up a DNA molecule.

1. What are the two DNA components shown in the Gizmo?

2. A **nucleoside** has two parts: a pentagonal sugar (deoxyribose) and a **nitrogenous base** (in color). When a nucleoside is joined to a phosphate, it is called a **nucleotide**.

How many different nitrogenous bases do you see?

**Note:** The names of these nitrogenous bases are adenine (red), cytosine (yellow), guanine (blue), and thymine (green).

### Activity A:

**Build a DNA molecule**

### Get the Gizmo ready:

- If necessary, click **Reset** to start the building process.

**Question:** What is the structure of DNA?

1. **Build:** Follow the steps given in the Gizmo to construct a molecule of DNA. (Note: For simplicity, this DNA molecule is shown in two dimensions, without the twist.)

Stop when the hint reads: "The DNA molecule is complete." In the spaces at right, list the sequence of nitrogenous bases on the left-hand strand, called the **leading strand**, and the right-hand strand, called the **lagging strand**.
