A Philosophy of Technology

Peter Vermaas,Peter Kroes,Ibo van de Poel,Maarten Franssen,Wybo Houkes,2022-05-31 In A Philosophy of Technology From Technical Artefacts to Sociotechnical Systems technology is analysed from a series of different perspectives The analysis starts by focussing on the most tangible products of technology called technical artefacts and then builds step wise towards considering those artefacts within their context of use and ultimately as embedded in encompassing sociotechnical systems that also include humans as operators and social rules like legislation Philosophical characterisations are given of technical artefacts their context of use and of sociotechnical systems Analyses are presented of how technical artefacts are designed in engineering and what types of technological knowledge is involved in engineering And the issue is considered how engineers and others can or cannot influence the development of technology These characterisations are complemented by ethical analyses of the moral status of technical artefacts and the possibilities and impossibilities for engineers to influence this

status when designing artefacts and the sociotechnical systems in which artefacts are embedded The running example in the book is aviation where aeroplanes are examples of technical artefacts and the world aviation system is an example of a sociotechnical system Issues related to the design of quiet aeroplane engines and the causes of aviation accidents are analysed for illustrating the moral status of designing and the role of engineers therein Table of Contents Technical Artefacts Technical Designing Ethics and Designing Technological Knowledge Sociotechnical Systems The Role of Social Factors in Technological Development Ethics and Unintended Consequences of Technology **Operations Research Proceedings**

The Blame Machine Robert B. Whittingham,2004 The Blame Machine describes how disasters and serious accidents result from recurring but potentially avoidable human errors It shows how such errors are preventable because they result

from defective systems within a company From real incidents you will be able to identify common causes of human error and typical system deficiencies that have led to these errors On a larger scale you will be able to see where in the organisational or management systems failure occurred so that you can avoid them The book also describes the existence of a blame culture in many organisations which focuses on individual human error whilst ignoring the system failures that caused it The book shows how this blame culture has in the case of a number of past accidents dominated the accident enquiry process hampering a proper investigation of the underlying causes Suggestions are made about how progress can be made to develop a more open culture in organisations both through better understanding of human error by managers and through increased public awareness of the issues The book brings together documentary evidence from recent major incidents from all around the world and within the Rail Water Aviation Shipping Chemical and Nuclear industries **AIR CRASH**

How can a 10 pound bird bring down a 150 000 pounds aircraft How would you feel if you were the captain on that aircraft responsible for 155 souls What would you do to prevent the disaster How would you communicate with other crew members and the passengers How would you determine where to try to ditch the plane in an unprecedented situation How would training and experience influence your decision What lessons can we learn from Captain Sullenberger s calm actions which incredibly saved all lives onboard Successful Ditching of US Airways Flight 1549 on Hudson River by Captain Chesley Sullenberger and First Officer Jeff Skiles on January 15 2009 This edition provides all the details of this incredible event transcripts of pilot s communications and the final results of a thorough investigation They analyzed in great detail the aircraft the accident the damages the personnel on board and on the ground their training and their communications their actions during the accident the survival aspects the birds the meteorology and more Finally they drew their conclusions and put together their recommendations based on the results of the examination to prevent similar events in the future Mergent Transportation Manual ,2002 Advanced Approach Light System Behrend, Ferdinand,2017-08-25 The constant growth in aviation requires the introduction of new

technologies in order to meet the demand for increasing capacity Especially the airport often represents the limiting factor Poor visibility conditions and an insufficiently equipped ground infrastructure regarding navigation facilities can lead to restrictions in maintaining the prevailing traffic flow especially during the approaches The conventional instrument landing system consists of numerous technical components which are causing expenses regarding maintenance and operation Smaller airports are often only partially or not at all equipped with the appropriate ground facilities This can bring air traffic to a total halt during certain visibility conditions New satellite based approach procedures offer the possibility to keep up air traffic even during poor visibility conditions regardless of the ground infrastructure required in the past These also offer now a barometric guidance or an augmented satellite signal for the vertical flight guidance component With the use of these approach procedures there is however the possibility of new faults and errors of the vertical flight guidance signal In a system based on electromagnetic radio waves a fault is angular meaning if the airplane gets nearer to the transmitter on ground the absolute possible failure of the target approach path gets smaller In a satellite based approach on the other hand it is constant during the whole approach The result can be a great deviation from the target approach path even just before reaching the runway threshold Often only after reaching the decision height and the herewith connected visual contact to corresponding ground features these faults can be recognized during poor visibility conditions close to the minima of a precision approach flight The larger the absolute error to the target approach path the more crucial it gets to initiate a missed approach procedure and therefore preventing a drop out of the relevant obstacle clearance limit Research has shown that through the currently present visual characteristics of the approach lighting system the actual position cannot be determined sufficiently regarding the runway threshold and the target approach path in order to estimate the decision height correctly The here presented Advanced Approach Light System is supposed to be an additional visual aid in order to support the cockpit crew in its decisions Therefore it should amount to improve the awareness of the situation regarding constant vertical faults The new navigation lighting system has been integrated into a flight simulator and was tested by licensed airline pilots within two test series with varying visibility conditions and decision heights Next to basic functionality operational usability in existing procedures of practical routines in the cockpit has been evaluated The results of the test series have demonstrated a significant improvement in identifying vertical faults with the support of the Advanced Approach Light System The decision to initiate a missed approach was made immediate and prompt and therefore the airplane stayed within the obstacle clearance limit even in a low decision height In contrast the trial participants without the new system took reluctant and often far too late decisions which lead to a drop out of the obstacle clearance limit The Advanced Approach Lighting System has significantly improved the situation awareness for pilots in command in recognizing vertical faults when reaching the decision height The integration in existing work routines and its operative use happened flawlessly and was highly accepted by the trial participants Das stetige Wachstum in der Luftfahrt erfordert die Einf hrung neuer

Technologien um der Nachfrage nach steigender Kapazität gerecht zu werden. Insbesondere das System Flughafen stellt hierbei oftmals den limitierenden Faktor dar. Schlechte Sichtbedingungen und die unzureichende bodenseitige Ausstrahlung mit Navigationseinrichtungen können für Einschränkungen in der Aufrechterhaltung des bestehenden Verkehrsflusses sorgen, insbesondere bei Landeanflügen. Das konventionelle Instrumentenlandesystem besteht aus einer Vielzahl an technischer Komponenten, die hohen Aufwand hinsichtlich Wartung und Betrieb verursachen. Kleine Flughäfen sind oft nur teilweise oder gar nicht mit den entsprechenden Bodenkomponenten ausgestattet, so dass der Flugbetrieb bei bestimmten Sichtbedingungen vollständig eingestellt werden muss. Neue satellitengestützte Anflugverfahren bieten die Möglichkeit, den Flugbetrieb auch bei schlechten Sichtbedingungen aufrechtzuerhalten, unabhängig von der bisher notwendigen Bodeninfrastruktur. Diese bieten mittlerweile ebenso eine auf der barometrischen Höhenmessung oder einem aufgewerteten Satellitensignal basierende vertikale Flugführungskomponente. Allerdings besteht mit der Verwendung entsprechender Anflugverfahren auch eine neue mögliche Fehlercharakteristik des vertikalen Flugführungssignals. Ist ein Fehler beim auf elektromagnetischen Funkwellen basierenden Instrumentenlandesystem winkelförmig, d. h. je näher sich das Luftfahrzeug dem Sender am Boden nähert, umso kleiner wird die absolute Ablage zum Sollanflugweg. Ist dieser bei satellitengestützten Anflügen konstant über den gesamten Endanflug. Eine große Abweichung vom Sollanflugweg auch kurz vor Erreichen der Landebahnschwelle kann die Folge sein. Bei schlechten Sichtbedingungen nahe den Minima eines Präzisionsanfluges kann der Fehler oft erst bei Erreichen der Entscheidungshöhe und dem damit verbundenen visuellen Kontakt zu entsprechenden Bodenmerkmalen erkannt werden. Je größer die Ablage zum Sollanflugweg, umso entscheidender ist das unverzügliche Einleiten des Fehlanflugs, um ein Verlassen der entsprechenden Hindernisfreibereiche zu verhindern. Untersuchungen haben gezeigt, dass die aktuell vorhandenen visuellen Merkmale der Anflugbefeuerung nicht ausreichend sein können, die tatsächliche Position bezüglich der Landebahnschwelle und des Sollanflugweges bei Erreichen der Entscheidungshöhe einzuschätzen. Das hier vorgestellte Advanced Approach Light System soll die Cockpitbesatzung als zusätzliches visuelles Merkmal bei der Entscheidung unterstützen und so zur Verbesserung des Situationsbewusstseins hinsichtlich konstanter vertikaler Fehler beitragen. Das neue Befeuerungssystem wurde in einen Flugsimulator integriert und innerhalb zweier Versuchsreihen mit unterschiedlichen Sichtbedingungen und Entscheidungshöhen von lizenzierten Verkehrspiloten getestet. Dabei sollte neben der grundsätzlichen Funktionalität auch die operative Einsetzbarkeit in den bestehenden Ablauf der Handlungsabläufe im Cockpit untersucht werden. Die Ergebnisse der Versuchsreihen haben eine erhebliche Verbesserung im Erkennen vertikaler Fehler mit Hilfe des Advanced Approach Light System aufgezeigt. Die Entscheidung zum Einleiten des Fehlanflugs erfolgte direkt und unverzüglich, wodurch das Luftfahrzeug auch bei sehr niedriger Entscheidungshöhe noch innerhalb des Hindernisfreibereiches blieb. Im Gegensatz dazu wurde bei den Versuchsteilnehmern, denen nicht das neue System zur Verfügung stand, die Entscheidung eher zögerlich und oftmals viel später getroffen, was zu einem Verlassen des Hindernisfreibereiches führte. Das

Situationsbewusstsein der Luftfahrzeugführer zum Erkennen vertikaler Fehler beim Erreichen der Entscheidungshöhe wurde durch das Advanced Approach Light System wesentlich erhöht. Die Integration in bestehende Arbeitsroutinen und der operative Einsatz erfolgten bei hoher Akzeptanz problemlos durch die Versuchsteilnehmer.

AIR CRASH INVESTIGATIONS, LOST OVER THE ATLANTIC The Crash of Air France Flight 447 THE FINAL REPORT George Cramoisi, editor, 2012-09-01. On 31 May 2009 the Airbus A330 flight AF 447 took off from Rio de Janeiro Galeão airport bound for Paris Charles de Gaulle. At around 2 h 02 the Captain left the cockpit for a short nap. At around 2 h 08 at flight level 350 the crew made a course change of 12 degrees to the left to avoid bad weather. At 2h 10min 05 likely following the obstruction of the Pitot probes by ice crystals the speed indications were incorrect and some automatic systems disconnected. The aeroplane's flight path was not controlled by the two copilots. They were rejoined 1 minute 30 later by the Captain while the aeroplane was in a stall situation that lasted until the impact with the sea at 2 h 14 min 28 s killing all 228 persons on board. It took almost two years to recover the wreck of the aircraft from a depth of 4 000 metres. The accident resulted from a succession of events such as inconsistency between the measured airspeeds inappropriate control inputs and the crew's failure to diagnose the stall situation. *Scientific and Technical Aerospace Reports*, 1994.
