Archaeological Chemistry Rsc Rsc Paperbacks:

Archaeological Chemistry A Mark Pollard, Carl Heron, 2007-10-31 The application of chemistry within archaeology is an important and fascinating area. It allows the archaeologist to answer such questions as what is this artefact made of, where did it come from and how has it been changed through burial in the ground, providing pointers to the earliest history of mankind. Archaeological Chemistry begins with a brief description of the goals and history of archaeological science and the place of chemistry within it. It sets out the most widely used analytical techniques in archaeology and compares them in the light of relevant applications. The book includes an analysis of several specific archaeological investigations in which chemistry has been employed in tracing the origins of or in preserving artefacts. The choice of these investigations conforms to themes based on analytical techniques and includes chapters on obsidian, ceramics, glass, metals and resins. Finally, it suggests a future role for chemical and biochemical applications in archaeology. Archaeological Chemistry enables scientists to tackle the fundamental issues of chemical change in the archaeological materials in order to advance the study of the past. It will prove an essential companion to students in archaeological science and chemistry, field and museum archaeologists and all those involved in conserving human artefacts.

Archaeological Chemistry (3rd Edition) A Mark Pollard, Carl Heron, Ruth Ann Armitage, 2017-01-16 Third edition of a comprehensive textbook ideal for students in archaeological science and chemistry, archaeologists and those involved in conserving human artefacts.

ARCHAEOLOGY - Volume I Donald L. Hardesty, 2010-06-15 Archaeology is a component of Encyclopedia of Social Sciences and Humanities in the global Encyclopedia of Life Support Systems (EOLSS) which is an integrated compendium of twenty-one Encyclopedias. Archaeology is a road for traveling into the past that is independent of and complementary to documents and memory. The archaeological record provides historical perspectives on variability and change in human life support systems with the potential for use in planning for future sustainable development. The Theme is organized into four different topics which represent the main scientific areas of the theme: Foundations of Archaeology, The Archaeology of Life Support Systems, World Cultural Heritage, Preserving Archaeological Sites and Monuments, which are then expanded into multiple subtopics each as a chapter. The first topic deals with historical, methodological and theoretical foundations of archaeology. The second topic explores the archaeological record of human life support systems and includes chapters on foraging, food production such as farming and nomadic lifestyles, civilizations, water management systems and sustainability. World cultural heritage is the third topic. Finally, the fourth topic covers the preservation of cultural memorials such as archaeological sites, landscapes and monuments. These two volumes are aimed at the following five major target audiences: University and College Students, Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers and Decision Makers, NGOs and GOs.

Chemistry of Paper J C Roberts, 2007-10-31 The manufacture of paper involves a large amount of chemistry including carbohydrate chemistry, pigments and resins and colloid and surface chemistry as well as elements of environmental and analytical chemistry.

Providing an overview of the making of paper from a chemical perspective this book deals with both the chemistry of paper as a material and the chemistry of its production The book explores several chemical processes involved in the production of paper the delignification of the wood fibres performed at elevated temperature and pressure the bleaching of the cellulose rich pulp using environmentally friendly systems the formation of the pulp into sheets of fibres strengthened by extensive inter fibre hydrogen bonding and finally the coating of the sheets in a manner appropriate to their end use This book is an informative and entertaining overview for students and others who require an introduction to the chemistry of paper manufacture

Varella, 2012-12-15 Conservation Science is a rather innovative application of instrumental analysis with steadily increasing importance Although the first attempts for preserving material from the cultural heritage on a scientific basis are found in the 19th century pioneer chemistry years only the use of sophisticated physicochemical techniques results in effective identification and deterioration studies of monuments and objects and in reliable intervention procedures This volume allows to gain solid knowledge and improved skills on the ways separation schemes and diagnostic methodologies are applied in the safeguarding and authentication of tangible works of art as well as on the modes of implementing novel safeguarding practices built on well established principles such as the use of laser in the decontamination of objects All techniques are covered at a state of the art level while selected applications permit addressing major groups of materials and artefacts Conservation Science is nowadays taught at master s level in all developed countries and museum laboratories increasingly adopt scientific approaches in their restoration initiatives The book is intended as a valuable tool for students and professionals active in these frames In addition it provides an indispensable manual for participants in the specialized intensive courses which are systematically offered by the authors under the auspices of the relevant European network *Materiality, Techniques and Society in Pottery Production* Daniel Alberó Santacreu, 2014-01-01 Daniel Alberó Santacreu presents a wide overview of certain aspects of the pottery analysis and summarizes most of the methodological and theoretical information currently applied in archaeology in order to develop wide and deep analysis of ceramic pastes The book provides an adequate framework for understanding the way pottery production is organised and clarifies the meaning and role of the pottery in archaeological and traditional societies The goal of this book is to encourage reflection especially by those researchers who face the analysis of ceramics for the first time by providing a background for the generation of their own research and to formulate their own questions depending on their concerns and interests The three part structure of the book allows readers to move easily from the analysis of the reality and ceramic material culture to the world of the ideas and theories and to develop a dialogue between data and their interpretation Daniel Alberó Santacreu is a Lecturer Assistant in the University of the Balearic Islands member of the Research Group Arqueo UIB and the Ceramic Petrology Group He has carried out the analysis of ceramics from several prehistoric societies placed in the Western Mediterranean as well as the study of handmade pottery from contemporary ethnic groups in Northeast Ghana *Working Method Approach for Introductory Physical Chemistry Calculations* Brian J Hathaway, Clair Murphy, Brian Murphy, 2019-05-16 A Working Method Approach for Introductory Physical Chemistry Calculations is a concise inexpensive

introduction to first year chemistry that is aimed at students who are weak in chemistry or have no chemistry on entry to university Such students usually find physical chemistry the most difficult part of the chemistry course and within this section numerical problem solving is an additional difficulty The text should also be invaluable to first year intending chemists This text provides an introduction to physical chemistry and the gas laws followed by chapters on thermodynamics chemical equilibrium electrochemistry and chemical kinetics Each section involves a brief introduction followed by a representative examination question which is broken down into a proposed working method Both short multiple choice questions and related full examination type questions are included This book will prove invaluable to students who need encouragement in a logical approach to problem solving in physical chemistry teaching them to think for themselves when faced with a problem

any age is included to demonstrate the physical chemical or mathematical principles involved Ideal for those studying food science or about to join the confectionery industry this mouth watering title will also be of interest to anyone with a desire to know more about the production of the world s favourite confectionery The Hammerum Burial Site Ulla Mannering,Tinna Mobjerg,Lise RAeder Knudsen,Hans Rostholm,2019-09-02 The Hammerum Burial Site is the story of a burial site told by more than 20 academics a fascinating combination of different archaeological and scientific studies analyzing individuals objects and context from different angles The site was named after the small modern day town of Hammerum 5 km east of Herning in the central part of Jutland Denmark As early as 1993 the museum investigated this burial site where seven inhumation graves emerged within a small area most of which turned out to be empty of finds Three of the graves did turn out however to contain well preserved organic material so they were removed as block samples in large wooden crates with a view to later excavation Thanks to a grant in 2009 from the Danish Cultural Agency s special pool for the conservation of objects of unique national importance the ENB pool a collaboration between the museum the Danish National Research Foundation Centre for Textile Research and the Conservation Centre in Vejle began These analyses show that grave 83 known as the Hammerum girls grave was a sensation All that remain of the deceased was her hair and her dress but it was the best preserved Danish Iron Age textile from an inhumation grave Therefore it offers an unique opportunity to analyse an object which in most cases has disappeared The analysis tells us an extraordinarily nuanced archaeological story of daily life and of pan European slow fashion a dress used in everyday life produced by carefully choosing fine fibres which together with the coiffure refers to a style recognizable throughout Europe and worn by a mobile well groomed well connected Iron Age female Moreover the preserved organic material permits us a rare glimpse of the grief of the bereaved We can see how they carefully wrapped the Hammerum Girl in skin and put blueberry twigs under her head before laying her to rest an act of compassion and mourning **Polymers and the Environment**

G Scott,2007-10-31 As environmental performance becomes increasingly important the development of man made polymers and their associated benefits has been overshadowed by problems relating to their ultimate disposal In the light of wider acceptance of polymers for use in high technology applications Polymers and the Environment aims to redress the balance The book reviews the properties and industrial applications of polymers and discusses their environmental benefits compared with traditional materials It also addresses the issues of polymer durability recycling processes to aid waste minimization and biodegradable polymers This text is intended to introduce the non specialist reader to the benefits and limitations of polymeric materials from an environmental viewpoint and will prove a useful book for both students and professionals Chemistry of Fragrances David H Pybus,Charles S Sell,2007-10-31 Modern perfumery is a blend of art science and technology with chemistry being the central science involved The Chemistry of Fragrances aims to educate and entertain and inform the audience of the very latest chemistry techniques and tools applied to fragrance creativity Beginning with the history of perfumes which goes back over fifty thousand years

the book goes on to discuss the structure of the Perfume Industry today The focus then turns to an imaginary brief to create a perfume and the response to it including that of the chemist and the creative perfumer Consumer research toxicological concerns and the use of the electronic nose are some of the topics discussed on this journey of discovery Written by respected experts in their fields this unique book gives an insider view of mixing molecules from behind the portals of modern day alchemy It will be enjoyed by chemists and marketeers at all levels *Patina on Historic Glass* Penelope Clifford, Vic Semeniuk, 2020-12-15 This book explores patina a micro crust of interlaminated silica and calcite developed on bottle glass that was partially buried for 70 100 years in dunes at Cossack Western Australia and is a world first in the detailed holistic study of this phenomenon It maps out a multifaceted approach involving soil chemistry granulometry mineralogy soil water hydrochemistry glass chemistry SEM mapping of patina and XRD and SEM EDS analyses as well as experimental leaching and pellicular water analyses of sand and dust in which the glass was embedded to highlight that to fully use patina for archaeological hydrochemical geochemical and climate studies there must be a multidisciplinary approach The patina on glass from Cossack yielded a wealth of micro structures providing insights into the processes of its formation Patination is complex reflecting wet and dry vadose conditions alternating acid and alkaline conditions and requiring many factors to be taken into account to obtain a comprehensive understanding of its development In practical terms properly used patina and its internal structures can date glass for use in archaeology determine soil and hydrochemical processes of solution precipitation and illuviation and unravel local intra decadal climate patterns The weathering metastability of glass also points to potential problems in recycling glass for use in infrastructure construction materials and containers for toxic waste and nuclear waste Basic Principles of Inorganic Chemistry Brian J Hathaway, Clair Murphy, Brian Murphy, 2007-10-31 General chemistry textbooks are usually lengthy and present chemistry to the student as an unconnected list of facts In inorganic chemistry emphasis should be placed on the connections between valence shell electron configuration and the physical and chemical properties of the element Basic Principles of Inorganic Chemistry Making the Connections is a short concise book that emphasises these connections in particular the chemistry of the Main Group compounds With reference to chemical properties Lewis Structures stoichiometry and spider diagrams students will be able to predict or calculate the chemistry of simple polyatomic compounds from the valence shell configuration and will no longer be required to memorise vast amounts of factual chemistry This book is ideal for students taking chemistry as a subsidiary subject as well as honours degree students **Adhesion Science** John Comyn, 2007-10-31 The use of adhesives is widespread and growing and there are few modern artefacts from the simple cereal packet to the jumbo jet that are without this means of joining Adhesion Science provides an illuminating account of the science underlying the use of adhesives a branch of chemical technology which is fundamental to the science of coatings and composite materials and to the performance of all types of bonded structures This book guides the reader through the essential basic

polymer science and the chemistry of adhesives in use at present It discusses surface preparation for adhesive bonding and the use of primers and coupling agents There is a detailed chapter on contact angles and what can be predicted from them A simple guide on stress distribution joints and how this relates to testing is included It also examines the interaction of adhesives and the environment including an analysis of the resistance of joints to water oxygen and ultra violet light

Adhesion Science provides a comprehensive introduction to the chemistry of adhesives and will be of interest not only to chemists but also to readers with a background in physical or materials science Brewing Ian S Hornsey,2007-10-31 It is believed that beer has been produced in some form for thousands of years the ancient Egyptians being one civilization with a knowledge of the fermentation process Beer production has seen many changes over the centuries and Brewing brings the reader right up to date Covering the various stages of beer production reference is also made to microbiology within the brewery and some pointers to research on the topic are given Written by an experienced brewer this book will appeal to all beer lovers but particularly those within the industry who wish to understand the processes and will be relevant to students of food or biological sciences
