**Laser Scanning for the Environmental Sciences** George Heritage, Andy Large, 2009-05-06 3D surface representation has long been a source of information describing surface character and facilitating an understanding of system dynamics from micro scale e g sand transport to macro scale e g drainage channel network evolution Data collection has been achieved through field mapping techniques and the use of remotely sensed data Advances in this latter field have been considerable in recent years with new rapid acquisition methods being developed centered around laser based technology The advent of airborne and field based laser scanning instruments has allowed researchers to collect high density accurate data sets and these are revealing a wealth of new information and generating important new ideas concerning terrain characterisation and landform dynamics The proposed book collates a series of invited peer reviewed

papers presented at the a conference on geoinformatics and LIDAR to be held at the National Centre for Geocomputation based in the National University of Ireland Maynooth Current constraints in field survey and DEM construction are reviewed together with technical and applied issues around the new technology The utility of the data in process modelling is also covered The book will be of great value to researchers in the field of geomorphology geostatistics remote sensing and GIS and will prove extremely useful to students and practitioners concerned with terrain analysis The proposed work will Highlight major technological breakthrough in 3D data collection Feature examples of application across a wide range of environmental areas Critically evaluate the role of laser based techniques in the environment Detail theory and application of laser techniques in the natural environment **The Ethics of Anthropology and Amerindian Research** Richard J.

Chacon,Rubén G. Mendoza,2011-12-14 The decision to publish scholarly findings bearing on the question of Amerindian environmental degradation warfare and or violence is one that weighs heavily on anthropologists This burden stems from the fact that documentation of this may render descendant communities vulnerable to a host of predatory agendas and hostile modern forces Consequently some anthropologists and community advocates alike argue that such culturally and socially sensitive and thereby politically volatile information regarding Amerindian induced environmental degradation and warfare should not be reported This admonition presents a conundrum for anthropologists and other social scientists employed in the academy or who work at the behest of tribal entities This work documents the various ethical dilemmas that confront anthropologists and researchers in general when investigating Amerindian communities The contributions to this volume explore the ramifications of reporting and specifically of non reporting instances of environmental degradation and warfare among Amerindians Collectively the contributions in this volume which extend across the disciplines of archaeology anthropology ethnohistory ethnic studies philosophy and medicine argue that the non reporting of environmental mismanagement and violence in Amerindian communities generally harms not only the field of anthropology but the Amerindian populations themselves **The Angry Earth** Anthony Oliver-Smith,Susannah M.
