Computer Analysis of Scenes of 3-Dimensional Curved Objects

NEVATIA,2013-12-20 1 0 2 The attention then turned to the problem of Body separation i e separation of occluding bodies in a scene See Guzman Falk and Waltz Grape Grape combined the separation of bodies with recognition by removing parts of the scene recognized as belonging to a known body All of these techniques were designed to work with polyhedral objects only and extensively use the properties of edges and vertices Though some impressive results have been reported Waltz Grape and perhaps some useful abstractions can be made the specific techniques used fail to generalize to a wider class of objects Among previous work on curved objects B K P Horn Horn presented techniques for extracting three dimensional depth data from a TV image using reflection characteristics of the surface Krakauer Krakauer represented objects by connections of brightness contours Ambler et al Ambler describe experiments with simple shapes including curved objects using relations within a two dimensional image However none of these efforts really addresses the problem of shape representation and description Work on outdoor scene analysis is also concerned with non polyhedral objects Bajcsy Yakimovsky but again no attention has been paid to shape analysis
