Wireless Networks Choong Seon Hong,Latif U. Khan,Mingzhe Chen,Dawei Chen,Walid Saad,Zhu Han,2022-01-01 Recently machine learning schemes have attained significant attention as key enablers for next generation wireless systems Currently wireless systems are mostly using machine learning schemes that are based on centralizing the training and inference processes by migrating the end devices data to a third party centralized location However these schemes lead to end devices privacy leakage To address these issues one can use a distributed machine learning at network edge In this context federated learning FL is one of most important distributed learning algorithm allowing devices to train a shared machine learning model while keeping data locally However applying FL in wireless networks and optimizing the performance involves a range of research topics For example in FL training machine learning models require communication between wireless devices and edge servers via wireless links Therefore wireless impairments such as uncertainties among wireless channel states interference and noise significantly affect the performance of FL On the other hand federated reinforcement learning leverages distributed computation power and data to solve complex optimization problems that arise in various use cases such as interference alignment resource management clustering and network control Traditionally FL makes the assumption that edge devices will unconditionally participate in the tasks when invited which is not practical in reality due to the cost of model training As such building incentive mechanisms is indispensable for FL networks This book provides a comprehensive overview of FL for wireless networks It is divided into three main parts The first part briefly discusses the fundamentals of FL for wireless networks while the second part comprehensively examines the design and analysis of wireless FL covering resource optimization incentive mechanism security and privacy It also presents several solutions based on optimization theory graph theory and game theory to optimize the performance of federated learning in wireless networks Lastly the third part describes several applications of FL in wireless networks **Signal Processing for 5G** Fa-Long Luo,Charlie Jianzhong
