

Both slow and rapid processes—  
from erosion to earthquakes—  
shape and reshape the Earth's  
surface.

#### Key Concept

Earth's surface is constantly changing.

#### National Standard

The surface of Earth changes. Some changes are  
due to slow processes, such as erosion and weathering,  
and some changes are due to rapid processes, such as  
landslides, volcanic eruptions, and earthquakes.

**I**n this unit, students learn that  
the Earth's surface is shaped  
by slow processes—such as  
wind, water, and ice—and rapid  
processes—such as volcanic  
eruptions and earthquakes.  
In this unit, students will learn  
the following:

- ➔ what created the Grand Canyon,
- ➔ how the movement of glaciers  
created different landforms,
- ➔ what happens when volcanoes  
erupt, and
- ➔ why earthquakes occur.

#### Teacher Background

Earth's surface is enormously varied and continuously  
changing. Mountains, valleys, islands, and icecaps  
are some of the features that make up our planet's  
landscape. These landforms are created and affected  
by earthquakes, volcanoes, wind, water, and ice.

The emergence of landforms is also related to processes  
occurring deep within Earth's crust. Earthquakes and  
volcanoes are the expressions of these processes. Active  
volcanoes and earthquakes are constantly at work,  
creating new features and destroying old ones.

Over millennia emerge, they are shaped and reshaped  
by forces of weather and erosion. Recognizable  
geographic features, such as the Grand Canyon, have  
created over millions of years of weathering and erosion.

For specific background information on each week's  
concepts, refer to the notes on pp. 66, 74, 80, and 86.

**The Pillars of Computation Theory** Arnold L.

Rosenberg,2009-10-27 The abstract branch of theoretical computer science known as Computation Theory typically appears in undergraduate academic curricula in a form that obscures both the mathematical concepts that are central to the various components of the theory and the relevance of the theory to the typical student This regrettable situation is due largely to the thematic tension among three main competing principles for organizing the material in the course This book is motivated by the belief that a deep understanding of and operational control over the few big mathematical ideas that underlie Computation Theory is the best way to enable the typical student to assimilate the big ideas of Computation Theory into her daily computational life      **Educart CBSE Question Bank Class 9 Social Science 2025-26 on new Syllabus 2026**

knowledge integration in diverse ways For example it may be conceived as a specific coherence building learning process which involves not only acquiring but interrelating knowledge of different types e g theoretical and practical or from different domains which together constitute a teacher s or educational specialist s professional knowledge base e g content knowledge pedagogical knowledge pedagogical content knowledge knowledge about using technologies for learning and instruction etc Furthermore knowledge integration also refers to the meaningful application of knowledge of different types and from various domains in order to act professionally and to teach successfully In many countries however future teachers and educational specialists often struggle with knowledge integration because the task of integrating knowledge across domains from various courses and from practical training is left largely to the individuals Thus the efficacy and quality of higher education programs particularly in pre service teacher education could be improved through careful attention to knowledge integration International Perspectives on Knowledge Integration aims at facilitating the consideration of knowledge integration in teacher training and higher education in both research and practice Specifically it explores theoretical conceptions and methods and reports on original research and good practices for fostering knowledge integration It is thus of interest to researchers faculty board members and lecturers concerned with teacher training and higher education as well as to student teachers and students of pedagogy education and educational psychology **CTET Paper-II**
