**Aviation in the Digital Age** Ruwantissa Abeyratne, 2020-06-25 All of the topics discussed in this book from sovereignty to cybercrime and from drones to the identification of passengers so are air traffic services and aeronautical communications All of these aviation related aspects are addressed in a 75 year old treaty called the Chicago Convention and its Annexes which as this book argues needs to be reviewed with a focus on its relevance and applicability in connection with Moore's Law which posits that transistors in computer microchips double in speed power and performance every two years while the cost of computers is halved during the same period Firstly in terms of traditional territorial sovereignty we have arrived at a point where there is a concept of data sovereignty and ownership that raises issues of privacy Data transmission becomes ambivalent in terms of territorial sovereignty and the Westphalian model may not be the perfect answer Whether it be the manufacture of airplanes the transfer of data on individuals or the transmission of aeronautical and telecommunications information all have to be carried out in accordance with the same fundamental principle duty of care Against the backdrop of the relevant provisions of the Chicago Convention and its Annexes the detailed analysis presented here covers key areas such as megatrends AI and international law in the digital age blockchain and aviation drones aviation and telecommunications aviation and the Internet cybersecurity and digital identification of passengers privacy In turn the book suggests how we can best manage this transition

**Investigating Human Error** Barry Strauch, 2017-03-16 In this book the author applies contemporary error theory to the needs of investigators and of anyone attempting to understand why someone made a critical error how that error led to an incident or accident and how to prevent such errors in the future Students and investigators of human error will gain an appreciation of the literature on error with numerous references to both scientific research and investigative reports in a wide variety of applications from airplane accidents to bus accidents to bonfire disasters Based on the author's extensive experience as an accident investigator and instructor of both aircraft accident investigation techniques and human factors psychology it reviews recent human factors literature summarizes major transportation accidents and shows how to investigate the types of errors that typically occur in high risk industries It presents a model of human error causation influenced largely by James Reason and Neville Moray and relates it to error investigations with step by step guidelines for data collection and analysis that investigators can readily apply as needed This second edition of Investigating Human Error has been brought up to date throughout with pertinent recent accidents and safety literature integrated It features new material on fatigue distraction eg mobile phone and texting and medication use It also now explores the topics of corporate culture safety culture and safety management systems Additionally the second edition considers the effects of the reduction in the number of major accidents on investigation quality the consequences of social changes on transportation safety such as drinking and driving cell phone use etc the contemporary role of accident investigation and the effects of the prosecution of those involved in accidents
