Multiple Representations in Biological Education David F. Treagust, Chi-Yan Tsui, 2013-02-01 This new publication in the Models and Modeling in Science Education series synthesizes a wealth of international research on using multiple representations in biology education and aims for a coherent framework in using them to improve higher order learning Addressing a major gap in the literature the volume proposes a theoretical model for advancing biology educators notions of how multiple external representations MERs such as analogies metaphors and visualizations can best be harnessed for improving teaching and learning in biology at all pedagogical levels The content tackles the conceptual and linguistic difficulties of learning biology at each level macro micro sub micro and symbolic illustrating how MERs can be used in teaching across these levels and in various combinations as well as in differing contexts and topic areas The strategies outlined will help students reasoning and problem solving skills enhance their ability to construct mental models and internal representations and ultimately will assist in increasing public understanding of biology related issues a key goal in today s world of pressing concerns over societal problems about food environment energy and health The book concludes by highlighting important aspects of research in biological education in the post genomic information age

Evolutionary Feedbacks Between Population Biology and Genome Architecture Tariq Ezaz,Scott V. Edwards,2018-12-06 This eBook presents all 10 articles published under the Frontiers Research Topic Evolutionary Feedbacks Between Population Biology and Genome Architecture edited by Scott V Edwards and Tariq Ezaz With the rise of rapid genome sequencing across the Tree of Life challenges arise in understanding the major evolutionary forces influencing the structure of microbial and eukaryotic genomes in particular the prevalence of natural selection versus genetic drift in shaping those genomes Additional complexities in understanding genome architecture arise with the increasing incidence of interspecific hybridization as a force for shaping genotypes and phenotypes A key paradigm shift facilitating a more nuanced interpretation of genomes came with the rise of the nearly neutral theory in the 1970s followed by a greater appreciation for the contribution of nonadaptive forces such as genetic drift to genome structure in the 1990s and 2000s The articles published in this eBook grapple with these issues and provide an update as to the ways in which modern population genetics and genome informatics deepen our understanding of the subtle interplay between these myriad forces From intraspecific to macroevolutionary studies population biology and population genetics are now major tools for understanding the broad landscape of how genomes evolve across the Tree of Life This volume is a celebration across diverse taxa of the contributions of population genetics thinking to genome studies We hope it spurs additional research and clarity in the ongoing search for rules governing the evolution of genomes Curriculum Applications In Microbiology: Bioinformatics In The Classroom Mel

Crystal Melendrez,Brad W. Goodner,Christopher Kvaal,C. Titus Brown,Sophie Shaw,2021-09-08 Towards a Competence-Based View on Models and Modeling in Science Education Annette Upmeyer zu Belzen,Dirk Krüger,Jan van Driel,2020-01-01 The book takes a closer look at the theoretical and empirical basis for a competence based view of models and modeling in science learning and science education research Current thinking about models and modeling is reflected The focus lies on the development of modeling competence in science education and on philosophical aspects including perspectives on nature of science The book explores interprets and discusses models and modeling from the perspective of different theoretical frameworks and empirical results The extent to which these frameworks can be integrated into a competence based approach for science education is discussed In addition the book provides practical guidance by outlining

evidence based approaches to diagnosing and promoting modeling competence The aim is to convey a strong understanding of models and modeling for professions such as teacher educators science education researchers teachers and scientists Different methods for the diagnosis and assessment of modeling competence are presented and discussed with regard to their potential and limitations The book provides evidence based ideas about how teachers can be supported in teaching with models and modeling implementing a competence based approach and thus how students can develop their modeling competence Based on the findings research challenges for the future are identified
