High-School Biology Today and Tomorrow National Research Council,Division on Earth and Life Studies,Commission on Life Sciences,Committee on High-School Biology Education,1989-02-01 Biology is where many of science s most exciting and relevant advances are taking place Yet many students leave school without having learned basic biology principles and few are excited enough to continue in the sciences Why is biology education failing How can reform be accomplished This book presents information and expert views from curriculum developers teachers and others offering suggestions about major issues in biology education what should we teach in biology and how should it be taught How can we measure results How should teachers be educated and certified What obstacles are blocking reform Annual Report of the Liverpool Marine Biological Station Liverpool Marine Biology Committee,Sir William Abbott Herdman,1899 **New Developments in the Biology of Chrysomelidae** Pierre Jolivet,Jorge Santiago-Blay,Michael Schmitt,2021-10-25 This book summarizes what is actually known about the biology of Leaf Beetles It is the most recent study in the field As we are well aware Chrysomelidae one of the three largest families of beetles are of great economic importance since they can be a serious pest to crops or on the other hand can be used to destroy imported weeds This is due to the selectivity of their feeding preferences In this way Chrysomelidae are an invaluable tool for studying plant selection mechanisms The many and varied topics dealt with in this book cover almost all aspects of phylogeny classification paleontology parasitology biogeography defenses population biology genetics and biological control as well as many other subjects The most renowned specialists in these fields have been chosen to put together a diverse state of the art publication Few beetle families have been studied in such detail as the Chrysomelids This is not only due to their economic importance but also to their incredible variety of forms and behaviors There are no less than 40 000 species currently in existence worldwide but probably 100 000 species have existed since the Jurassic when they first came into being with the Cycadoids and other primitive plant families later to diversify during the Cretaceous with the advent of flowering plants **Proceedings of the Fifteenth Annual Symposium on Sea Turtle**

Appel, 2003-04-30 Historians of the postwar transformation of science have focused largely on the physical sciences especially the relation of science to the military funding agencies In *Shaping Biology* Toby A Appel brings attention to the National Science Foundation and federal patronage of the biological sciences Scientists by training NSF biologists hoped in the 1950s that the new agency would become the federal government s chief patron for basic research in biology the only agency to fund the entire range of biology from molecules to natural history museums for its own sake Appel traces how this vision emerged and developed over the next two and a half decades from the activities of NSF s Division of Biological and Medical Sciences founded in 1952 through the cold war expansion of the 1950s and 1960s and the constraints of the Vietnam War era to its reorganization out of existence in 1975 This history of NSF highlights fundamental tensions in science policy that remain relevant today the pull between basic and applied science funding individuals versus funding departments or institutions elitism versus distributive policies of funding issues of red tape and accountability In this NSF funded study Appel explores how the agency developed how it worked and what difference it made in shaping modern biology in the United States Based on formerly untapped archival
